**Supplementary Figure 1. Full transcription of the photosynthetic eukaryote chloroplast genome.** This is an enlarged version of the map in **Figure 1A and B**. The outer and third tracks represent the plastome genes, the inner track shows the four

genomic regions of the plastome, and the black histogram of the second track represents RNAseq reads mapping (scale  $\log_{10}$ -transformed numbers of sequence reads per nucleotide).

**Supplementary Table 1. The representative transcription units of chloroplast genes in higher plants.**
