## Supplementary Methods

**Phylogenetic hypothesis.** Although previous studies have used various DNA markers, we found that the plastid marker *ndhF*, as well as the nuclear *ITS* were the ones that have been extensively sampled across subgenera. However, high divergence of *ITS* sequences within *Euphorbia* created a high level of alignment ambiguity at the genus level. Therefore, we based our phylogenetic analysis only on the *ndhF* sequence data. Sequences were aligned using MAFFT Version 7.205<sup>1</sup> with default parameters and subsequent manual adjustments were made in Mesquite Version 3.01<sup>2</sup>. Indels were in triplets apart from autapomorphic indels in certain sequences and in non-protein coding parts of the sequence. The nucleotide substitution model was determined in jModelTest version 2.1.7<sup>3,4</sup>. Using the Akaike Information Criterion<sup>5</sup> (AIC) GTR + I + G was selected as best model. Bayesian MCMC analyses<sup>6</sup> were performed using MrBayes version 3.2.5<sup>7</sup>. Two concurrent runs of 4 chains of  $1 \times 10^7$  generations were executed, sampling every 500 generations. Examination of the trace files in Tracer 1.6.0<sup>8</sup> demonstrated convergence of the runs and the average standard deviation of split frequencies in MrBayes reached a value below 0.007. Tracer was also used to ensure an effective sample size of > 200 for all parameters. The plot of the log likelihood values in Tracer indicated a relative burn-in period of 10%. Therefore, the first 10% of the trees from each run were disregarded when computing the consensus tree in MrBayes.

**Medicinal uses of species of the genus *Euphorbia*.** In all phylogenetic manipulations, information below the species rank was not taken into account (all relevant information was merged at the species rank). Species in the phylogenetic tree with no record in the database<sup>9</sup> were scored as having no use (assigning 0 as the binary trait in the data matrix).

**Identifying *Euphorbia* uses modulating an inflammatory response.** A use record in our database<sup>9</sup> was allocated to the *inflammatory response* category if either present treatment methods could likely mediate an inflammatory response or if the symptom of the disease for which the plant species is used could be associated to an inflammatory response. Species were assigned to the *inflammatory response* category, when at least one of their described uses in the database<sup>9</sup> could be linked to an inflammatory response.

**Evolutionary patterns of medicinal properties in *Euphorbia*.** The D statistic is independent of tree size and trait prevalence (number of species in one category divided by the total number of species in the tree) if the tree has at least 50 terminals<sup>10</sup>. Our tree of 560 species therefore allowed the assumption of an unbiased estimate for D. However, cases of extremely low prevalence (e.g. 0.02 and under, or up to 8 species in a category in our study) have not been tested by Fritz and Purvis<sup>10</sup>. For our study, we considered categories with prevalence below 0.02 as potentially biased and therefore did not include them in any analysis. All comparative analyses were performed on phylogenograms with branch lengths proportional to DNA changes. Trees were only made ultrametric using the *chronopl* function in the R package *ape*<sup>11</sup> after statistical analyses for visualization purposes. Additional to the R packages mentioned in the main text also *geiger*<sup>12</sup> and *plyr*<sup>13</sup> were used. For graphical representation the tree drawing tool FigTree Version 1.4.2 (<http://tree.bio.ed.ac.uk/software/figtree/>) as well as the R environment extended by corresponding packages were used.

**Supplementary Figure 1. Bayesian majority consensus tree.** The tree is based on publicly available sequences of the marker *ndhF*. Branches are coloured according to the posterior probabilities.

**Supplementary Table 1. Species sampled per subgeneric clade.** Number of (medicinal) species sampled and corresponding estimated number of species per subgeneric clade, according to<sup>14–17</sup>.

Clade	Sampled	Estimated	Medicinal species
<i>Athymalus</i>	91 (60%)	150	8
<i>Chamaesyce</i>	127 (21%)	600	19
<i>Esula</i>	190 (40%)	480	23
<i>Euphorbia</i>	137 (21%)	>650	15
<b>Total</b>	<b>560 (30%)</b>	<b>&gt;1880</b>	<b>65</b>

Genitourinary System Disorders (36)	small breasts (1) no

**Supplementary Table 4 continued. Re-classification of EBDCS *medicines*. Re-classification of Economic Botany Data Collection Standard (EBDCS) category medicines into categories of *inflammatory response*.**

EBDCS subcategories	inflammatory response
Genitourinary System Disorders (36)	aphrodisiac (1) diuretic (4)
Genitourinary System Disorders (36)	emmengogue (1) blennorrhagia (2)
Genitourinary System Disorders (36)	dysuria (3)
Genitourinary System Disorders (36)	female infertility (2)
Genitourinary System Disorders (36)	male infertility (2)
Genitourinary System Disorders (36)	haematuria (6)
Genitourinary System Disorders (36)	impotence (1)
Genitourinary System Disorders (36)	leukorrhoea (2)
Genitourinary System Disorders (36)	oliguria (1)
Genitourinary System Disorders (36)	unspecified (8)
Infections/Infestations (75)	infestations, arthropod infestations (5)
Infections/Infestations (75)	infections, fever (7)
Infections/Infestations (75)	infections, microbial infections, bacterial infections (27)
Infections/Infestations (75)	infections, microbial infections, fungal infections (4)
Infections/Infestations (75)	infections, microbial infections, viral infections (8)
Infections/Infestations (75)	infections, parasitic infections (19)
Infections/Infestations (75)	infections, unspecified (5)
Inflammation (47)	digestive system, intestine (22), gums (1), small intestine (1), unspecified (1)
Inflammation (47)	genitourinary system, breasts (2), kidneys (1)

**Supplementary Table 4 continued. Re-classification of EBDCS *medicines*. Re-classification of Economic Botany Data Collection Standard (EBDCS) category medicines into categories of *inflammatory response*.**

	EBDCS subcategories	<i>inflammatory response</i>
Inflammation (47)		
Inflammation (47)	muscular-skeletal system, limbs (1), possible bones (1), soft tissues (2)	
Inflammation (47)	respiratory system, bronchi (9), respiratory mucosae (1), unspecified (1)	possible
Injuries (60)	sensory system, conjunctivae, (4) abscesses (3)	possible
Injuries (60)	blisters (2)	possible
Injuries (60)	burns (1)	possible
Injuries (60)	haemorrhages (26)	no
Injuries (60)	injuries (1)	no
Injuries (60)	wounds (26)	possible
Injuries (60)	unspecified (1)	possible
Mental Disorders (7)	hallucinogenic (1)	no
Mental Disorders (7)	narcotic (1)	no
Mental Disorders (7)	alcohol dependence (3)	no
Mental Disorders (7)	sleep disorders, hypnotic (1)	no
Mental Disorders (7)	unspecified (1)	no
Metabolic System Disorders (10)	gout (1)	possible
Metabolic System Disorders (10)	diaphoretic (9)	no
Muscular-Skeletal System Disorders (12)	rheumatism (7)	possible
Muscular-Skeletal System Disorders (12)	spasms (1)	no
Muscular-Skeletal System Disorders (12)	sprains (2)	possible
Muscular-Skeletal System Disorders (12)	asthenia (1)	possible
Muscular-Skeletal System Disorders (12)	lumbago (1)	possible
Neoplasms (15)	unspecified neoplasms (14)	possible
Neoplasms (15)	malignant neoplasms (1)	possible
Nervous System Disorders (7)	stimulant (4)	no

**Supplementary Table 4 continued. Re-classification of EBDCS *medicines*. Re-classification of Economic Botany Data Collection Standard (EBDCS) category medicines into categories of *inflammatory response*.**

	EBDCS subcategories	inflammatory response
Nervous System Disorders (7)	paralysis (2) unspecified (1)	no unknown
Nervous System Disorders (7)	malnutrition (1)	no
Nutritional Disorders (10)	tonic (8)	no
Nutritional Disorders (10)	vitamin D deficiency (1)	no
Pain (31)	muscular-skeletal system, chest (3), head (3), body (1)	possible
Pain (31)	digestive system, teeth (10), stomach (5)	possible
Pain (31)	nervous system, nerves (1)	no
Pain (31)	respiratory system, pharynx (1)	possible
Pain (31)	sensory system, ears (1)	possible
Pain (31)	skin/subcutaneous cellular tissue disorders, skin (1)	possible
Pain (31)	unspecified (5)	unknown
Poisonings (16)	bites and stings (12)	no
Poisonings (16)	antihistaminic (1)	possible
Poisonings (16)	medicine poisoning (1)	unknown
Poisonings (16)	unspecified (2)	no
Pregnancy/Birth/Puerperium Disorders (23)	lactation stimulant (15)	no
Pregnancy/Birth/Puerperium Disorders (23)	labour induction (1)	no
Pregnancy/Birth/Puerperium Disorders (23)	postpartum depurant (1)	no
Pregnancy/Birth/Puerperium Disorders (23)	unspecified (6)	unknown
Respiratory System Disorders (40)	bronchial affections (3)	possible
Respiratory System Disorders (40)	asthma (22)	possible
Respiratory System Disorders (40)	expectorant (1)	no
Respiratory System Disorders (40)	breathlessness (1)	possible

**Supplementary Table 4 continued. Re-classification of EBDCS *medicines*. Re-classification of Economic Botany Data Collection Standard (EBDCS) category medicines into categories of *inflammatory response*.**

EBDCS subcategories	<i>inflammatory response</i>
Respiratory System Disorders (40)	pneumonia (1)
Respiratory System Disorders (40)	coughs (10)
Respiratory System Disorders (40)	unspecified (2)
Sensory System Disorders (21)	ear troubles (1)
Sensory System Disorders (21)	remove pus inside ear (1)
Sensory System Disorders (21)	deafness (1)
Sensory System Disorders (21)	eye disorders (14)
Sensory System Disorders (21)	remove corneal opacities (1)
Sensory System Disorders (21)	blindness (1)
Sensory System Disorders (21)	cataracts (2)
Skin/Subcutaneous Cellular Tissue Disorders (99)	emollient (1)
Skin/Subcutaneous Cellular Tissue Disorders (99)	disinfectant (1)
Skin/Subcutaneous Cellular Tissue Disorders (99)	astringent (6)
Skin/Subcutaneous Cellular Tissue Disorders (99)	antiseptic (1)
Skin/Subcutaneous Cellular Tissue Disorders (99)	whitlows (1)
Skin/Subcutaneous Cellular Tissue Disorders (99)	warts (18)
Skin/Subcutaneous Cellular Tissue Disorders (99)	ulcers (3)
Skin/Subcutaneous Cellular Tissue Disorders (99)	sunburn (1)
Skin/Subcutaneous Cellular Tissue Disorders (99)	sores (13)
Skin/Subcutaneous Cellular Tissue Disorders (99)	rashes (4)
Skin/Subcutaneous Cellular Tissue Disorders (99)	pustules (1)
Skin/Subcutaneous Cellular Tissue Disorders (99)	psoriasis (1)
Skin/Subcutaneous Cellular Tissue Disorders (99)	itching (5)
Skin/Subcutaneous Cellular Tissue Disorders (99)	irritation (1)
Skin/Subcutaneous Cellular Tissue Disorders (99)	hair loss (1)
Skin/Subcutaneous Cellular Tissue Disorders (99)	eczema (6)
Skin/Subcutaneous Cellular Tissue Disorders (99)	dermatitis (2)

**Supplementary Table 4 continued. Re-classification of EBDCS *medicines*. Re-classification of Economic Botany Data Collection Standard (EBDCS) category medicines into categories of *inflammatory response*.**

EBDCS subcategories	<i>inflammatory response</i>
Skin/Subcutaneous Cellular Tissue Disorders (99)	carbuncles (6)
Skin/Subcutaneous Cellular Tissue Disorders (99)	calluses (1)
Skin/Subcutaneous Cellular Tissue Disorders (99)	boils (2)
Skin/Subcutaneous Cellular Tissue Disorders (99)	acne (2)
Skin/Subcutaneous Cellular Tissue Disorders (99)	rubefacient (1)
Skin/Subcutaneous Cellular Tissue Disorders (99)	remove thorns (1)
Skin/Subcutaneous Cellular Tissue Disorders (99)	moles (1)
Skin/Subcutaneous Cellular Tissue Disorders (99)	freckles (1)
Skin/Subcutaneous Cellular Tissue Disorders (99)	unspecified (18)
Unspecified Medicinal Disorders (78)	unknown
