

S4 Fig. Agonist profile of EVP-6124 and TC-5619 in voltage clamp electrophysiology. Results show the mean \pm S.E.M. peak current (open circles) or net charge crossing the membrane (closed circles) normalized to the maximal response induced by ACh determined in HEK293/rat $\alpha 7$ nAChR cells (TC-5619; n=3) or HEK293/human $\alpha 7$ nAChR cells (EVP-6124; n=4).
