

S6 Fig. NS-6740 does not impact NOR performance at doses achieving high levels

of $\alpha 7nAChR$ occupancy in mice. A) Mice were treated with either vehicle or NS-6740 40 min prior to training and NOR examined 24 h later. Results show the mean \pm S.E.M. time spent exploring the novel (white bar) or familiar (grey bar) objects (n=10-14/group). B) Mice were treated with NS-6740 and brains collected for occupancy determinations 30 min later. Results show the mean \pm SEM occupancy (n=4/group).
