

**S4 Fig. Expression levels from microarray data of other monocytic (A) and fibroblastic (B) transcription factors.** (A) Knocking down fibroblastic TRNW significantly up-regulated several monocytic TFs such as *LMO2*, *MAFB*, *MAF*, *NR4A2*, and *STAT5A* (\*\*: p -value < 0.05, t-test). (B) Overexpressing monocytic TRNW merely down-regulated significantly in *MKX*.
