

Supplemental Figure S4

A Wild-type Col lines

B

Supplemental Figure S4. *Pst* DC3000 infection on WT (Col) lines with DEX and mock treatment. **(A)** Diseased state of DEX-treated WT (Col) and mock-treated WT (Col) are similar. 5-weeks old Arabidopsis plants were spray inoculated with a suspension of *Pst* DC3000 (108 CFU) or had mock treatment. The images of plants showing disease symptom were taken 3 days after inoculation. **(B)** Bacterial growth in leaves of DEX-treated WT (Col) and mock-treated WT (Col) lines, 3 days after spray inoculation of *Pst* DC3000 suspension or mock treatment. Results are shown as mean \pm SEM based on three replications (P-value <0.05).
