

# Tao et al. Supplemental figure S6

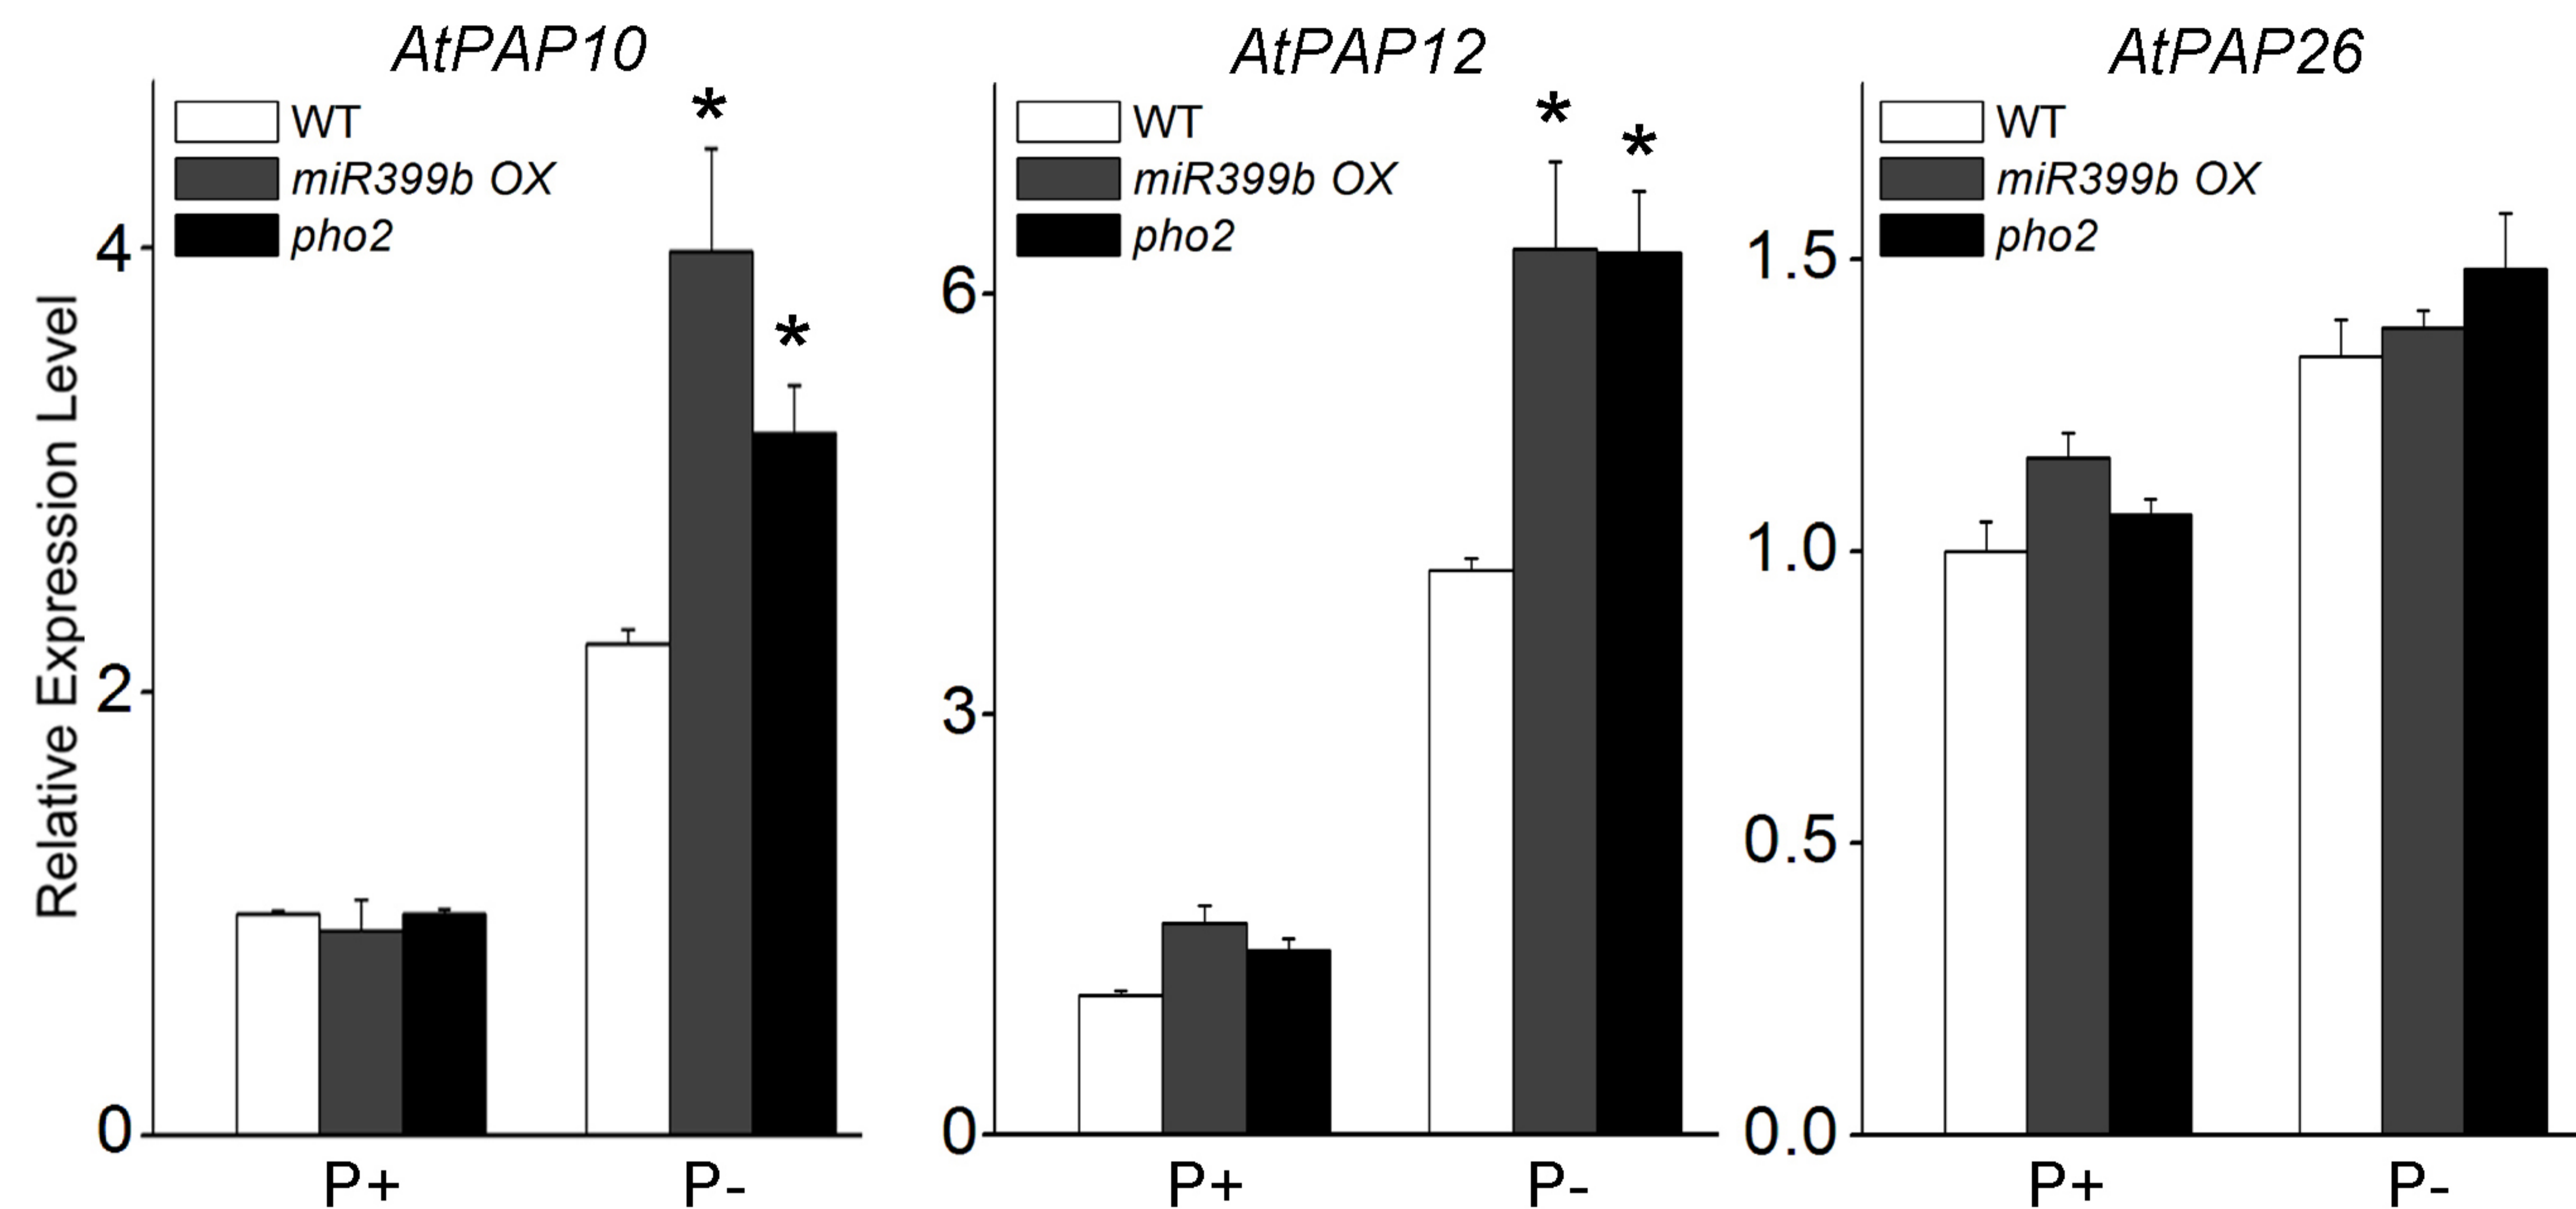

Figure S6. qPCR analysis of relative expression of *AtPAP10*, *AtPAP12* and *AtPAP26* APase genes in roots of the 8-day-old seedlings of WT, *miRNA399 OX* and *pho2*. Values represent means with SE of three replicates. Asterisks indicate significant difference ( $p < 0.05$ ) from the WT according to Student's *t*-test.
