

# Supplemental Figure S2

**Supplemental Figure S2. Major urinary protein (Mup) genes were down-regulated in HNF6 KO with HNF6 binding sites nearby.** (A) Relative mRNA level of Mup genes in the wildtype control and HNF6 KO livers. Data are expressed as mean±SEM (\* Student's t-test,  $p < 0.05$ ,  $n=4$  per group). (B) Genome browser view of HNF6 ChIP-seq peaks near Mup genes.
