

Supplemental Figure S3

A Mouse Liver ZT10

B Transfected HEK293T Cell

Supplemental Figure S3. Interaction between Rev-erb α and HNF6 is indirect or not strong enough to be detected by co-immunoprecipitation western blot. (A) Mouse liver lysates were immunoprecipitated by Rev-erb α antibody, HNF6 antibody or IgG, followed by immunoblot analysis by Rev-erb α antibody and HNF6 antibody. (B) Flag-Rev-erb α and Myc-Flag-HNF6 were coexpressed in HEK293T cells. Cell lysates were immunoprecipitated with Myc antibodies or IgG, followed by immunoblot analysis by Flag antibody.
