

Supplementary figure S6. Ectopic expression of FHL2 stimulates GCT cell migration. **a)** Wound healing assay showing the mobility of KGN cells transfected with empty vector (Ctrl) or FHL2-expressing vector (FHL2). The initial wound edge is highlighted by red dashed lines. cells were incubated for 18h before measuring the wound area. **b)** Quantitative result showing mobility change of KGN cells transfected with empty control vector (Ctrl) or FHL2-expressing vector (FHL2). Each bar represents mean \pm SEM of five repeats. ***: $P < 0.001$ compared with control group (Ctrl).
