

Supplementary Information

Supplementary figure S7. RT-PCR results showing effects of *FHL2* on *AKT* expression in KGN and COV434 cells. a) *FHL2* and *AKT* mRNA levels in KGN cells transfected with non-targeting control siRNA (siCtrl) or *FHL2* siRNA (siFHL2). Knockdown of *FHL2* suppressed expression of *AKT1*, but not *AKT2* and *AKT3*. b) *FHL2* and *AKT* mRNA levels in KGN and COV434 cells. *FHL2* and *AKT* are differentially expressed in *FHL2* and COV434 cell lines. Experiments are independently repeated for three times and the representative images are presented.
