

Table S5. Light chain of VRC01-class antibodies undergoes somatic hypermutation to accommodate the N276 glycan on Env. The glycan site at N276 was removed by alanine mutagenesis (N276A) on a cross-clade 13-virus panel and tested for neutralization compared to the corresponding virus without the glycan site removed (wild-type, WT). Virus panels were tested for neutralization by chimeric VRC01-class antibodies containing a mature heavy chain and germline light chain. Presented values are neutralization IC₅₀ in µg/ml and colored according to the listed legend.

Mature heavy chain/germline light chain chimeras													
	CLADE	VIRUS	VRC03	CHA31	PGV04	NIH45-46	PGV19	3BNC60	12A12	12A21	VRC01	PGV20	Neutralization IC ₅₀ (µg/mL)
