^a Percent prevalence of condition based on the sum of observations from all years and cohorts that each particular condition was assessed and not necessarily the overall sum of observations for all years and all cohorts, as in the case of core non-sex-specific conditions assessed in all years.

^b Adjusted for age, sex, cohort, and all other chronic diseases and conditions

^c Diseases and conditions not specifically ascertained in the questionnaire but self-reported by participants

Abbreviations: n, number; N/A, not applicable (sex-specific conditions) or not available (condition not assessed in the cohort)

Web Figure 1. Relative difference between coefficient of mean bootstrapped resamplings and original coefficient for the core set of conditions available in all years in at least one cohort among the Nurses' Health Study, Nurses' Health Study II, and Health Professionals Follow-up Study cohorts between 1992-2008.

Abbreviations: AIDS, acquired immune deficiency syndrome; ALS, amyotrophic lateral sclerosis; BPH, benign prostatic hyperplasia; DVT, deep venous thrombosis; CABG, coronary artery bypass graft surgery; COPD, chronic obstructive pulmonary disease; PE, pulmonary embolus.

Web Table 3. Adjusted estimates of the Short Form-36 physical functioning scale based on the mean of 100 bootstrapped resamplings for conditions assessed in all years in at least one of the Nurses' Health Study, Nurses' Health Study II, or Health Professionals Follow-up Study cohorts between 1992-2008.
