

Figure S5 The $\Delta rlmA$ mutant has increased sensitivity to the antifungal triazole drugs. (A) The antifungal susceptibility according to E-test gradient strips for voriconazole. Endpoints 0.125 (wild-type) and 0.094 ($\Delta rlmA$). (B) The indicated numbers of conidia were inoculated onto solid YG plates that were supplemented with fluconazole. The plates were incubated for 48 hours at 37°C.
