

Supplementary Data

SUPPLEMENTARY FIG. S1. Highlighter plot of selected RRE sequences. The sequences of 234-nt RREs from 12 selected viruses were aligned to the RRE from NL4-3. *Colored bars* denote the position of nucleotide differences from the reference. The *color key* is shown on the y-axis. The *gray bars* correspond to those regions that would fold to form a five stem-loop structure. (Modified from Highlighter for Nucleotide Sequences v2.2.3.⁶⁵) RRE, Rev response element.
