S-1. Endogenous NPM1 localizes to the cytoplasm of apoptotic CGNs. *A and B.* CGNs were treated with HK (A) and LK (B) media on day 7 *in vitro* for 24 h. Immunocytochemistry was then performed with an NPM1 antibody. Pictures show representative 20x (A and B, top) fields for each condition. 40x (A and B, bottom) images were taken of regions within white box. Arrows indicate neurites.
