Supplementary information, Figure S4 Ion influx/efflux did not occur in GSDMD-C-HBD*-HA-expressing CHO cells treated with 4-OHT. (A-C) Representative time-lapse images of GSDMD-C-HBD*-HA-expressing CHO cells treated with 4-OHT. Cells were preloaded with ANG-2 (A), Fluo-4 (B) or APG-2 (C) and cultured in PI-containing medium. Relative changes in individual ion indicator and PI fluorescence over time in one representative cell were shown in the right panel. Scale bar, 10 μ m.
