

Figure S4 (de Anda FC)

Figure S4. Ionomycin has a dose-response effect in developing cortical neurons. (A) In control slices (*in utero* electroporated at E15, brain slices prepared at E18 and incubated 24 hr) low percentage ($1.09 \pm 0.57\%$) of mCherry-transfected cell in the CP express caspase-3. (B) Ionomycin 5 μM does not change the expression of caspase-3 in mCherry-transfected cell in the CP compared with control slices ($2.12 \pm 0.53\%$; *in utero* electroporated at E15, brain slices prepared at E18 and incubated 24 hr). (C) Ionomycin 10 μM increases significantly the expression of caspase-3 in mCherry-transfected cell in the CP compare with control slices ($26.80 \pm 2.85\%$; *in utero* electroporated at E15, brain slices prepared at E18 and incubated 24 hr). (D) Quantification from (A-C) showing percentage of mCherry-transfected cells positive to caspase-3 in the CP upon ionomycin treatment (Control = 1108 cells from fourteen slices from five brains from three litters; 5 μM = 1320 cells from twenty one slices from eight brains from three litters; 10 μM = 637 cells from twelve slices from four brains from three litters $p < 0.0001$ by one-way ANOVA, posthoc Dunnett test $***p < 0.001$; values are mean \pm s.e.m.). (E) Dose-response effect of ionomycin in cell number of mCherry transfected cells in the CP. Cortical slices were prepared for time-lapse analysis at E18 (*in utero* electroporated at E15). Time-lapse analysis was performed before (1 hr) and after ionomycin treatment (12 hr of ionomycin treatment). 50 μM ($71.48 \pm 1.44\%$) and 10 μM ($86.90 \pm 3.23\%$) decreased significantly the number of mCherry transfected cells in the cortical plate after 12 hr imaging. 5 μM did not decrease the number of mCherry-transfected cells in the CP (106.55 \pm 1.82%; 5 μM (before ionomycin) = 174 cells from four slices; 10 μM (before ionomycin) = 180 cells from four slices; 50 μM (before ionomycin) = 222 cells from four slices; $p < 0.0001$ by one-way ANOVA, posthoc Dunnett test $**p < 0.01$, $***p < 0.001$; values are mean \pm s.e.m.). Scale bar: 200 μm (left panel) and 20 μm (right panel).
