Figure S1 – SGLT2 inhibitors block the proliferation of various cancer cells

Cellular proliferation of (A) colon, (B) liver, (C) breast and (D) ovarian cancer cells treated with Canagliflozin or Dapagliflozin and expressed relative to the vehicle controls for 72h (n=3, in quadruplicate). Results are expressed as the mean and standard error of the mean (SEM). Vehicle versus treatment ** = $p<0.01$, *** = $p<0.001$, **** = $p<0.0001$ by one-way ANOVA for A-D.
