**Figure S1:** Graphical presentation of different methods of adherence calculation. Abbreviations: PDC: proportion of days covered; MPR: medication possession ratio.

PDC- days of drug available over number of days in observation period capped at 1
PDC=(AC+CD+EF+GI)/AH capped at 1(100%) max

MPR- total days drug supply is available (without truncation) over number of days in observation period
MPR=(AB+CD+EF+GI)/AH
