

Supplementary Figure S4

Fig.S4. IHC staining for CD80, CD86 and CD83 in lymph nodes The sections of the LN collected at different time intervals from -1d to 23d period (1/per mouse and for 3 mice) from tumor control and treatment group mice, were stained with CD80 (panel A), CD86 (panel B) and CD83 (panel C) antibodies by IHC Kit. The results were observed in (40×10) horizon at time for -1d, 9d, 16d and 23d between tumor group and treatment group which stand for $p < 0.001$. Bar=50 μ m.
