## Betacellulin induces Slug-mediated down-regulation of E-cadherin and cell migration in ovarian cancer cells

## SUPPLEMENTARY FIGURE

**Supplementary Figure S1: Elevated betacellulin is associated with reduced disease free survival but not overall survival in ovarian cancers.** The cBioPortal for Cancer Genomics was used to query ovarian carcinomas from The Cancer Genome Atlas (n=489) for up-regulation of betacellulin mRNA above the median. Disease free **A.** and overall **B.** survival differences between unaltered samples and those with elevated betacellulin are displayed as Kaplan-Meier survival curves with a *P* value from a Log-rank test.
