

Supplemental Figure S2. Localization of SP-mCitrine fused to the transmembrane (TM) segment of the GPI signal in transient expression in *N. benthamiana*. **A-B''**, Co-localization of mCherry-ER with SP-mCitrine fused to the predicted TM segment of the C-terminal GPI signal of BG_{pap} (mCit-TM^{BG}) (A-A'') and AGP4 (mCit-TM^{AG}) (B-B''). Diagrams of the fusion proteins and sequence of the TM segment are shown above. Images are Z-projections of several confocal slices. Bars = 10 μ m.
