

Graphlet Based Metrics for the Comparison of Gene Regulatory Networks:

Fig S3: Comparison of equivalent time points under the two conditions studied using REC for each graphlet type

Alberto J.M. Martin, Calixto Dominguez, Sebastián Contreras-Riquelme, David S. Holmes and Tomas Perez-Acle

Comparison of equivalent time points under the two conditions studied: REC. The plots in the first row show REC cumulative results for each graphlet type using the four states of the condition specific networks for the biofilm formation as reference network (sub-figure A) or suspension (sub-figure B).
