

Supplementary Figure 2. Expression of curli fibers and flagella are anticorrelated throughout the biofilm growth. Scatter plots showing expression of PcsG A-sfGFP and PflI C-mCherry in the pellicle, supernatant, and surface-attached cells at selected time points, measured by flow cytometry. Expression levels of PcsG A-sfGFP and PflI C-mCherry are plotted on the x-axis and y-axis, respectively. The color scale is as in Figure 4.
