

**Figure S3.** The effects of *Wolbachia pipientis* infection on the measured phenotype.

(A) Relative mean DT measured for 43 DGRP lines. Black colour indicates no *Wolbachia* infection (22 lines), while blue colour is assigned for infected strains (21 lines). (B) Relative mean DT for the two *Wolbachia* groups. Black and blue are mean phenotypes among non-infected and infected lines, respectively. There is no effect of *Wolbachia* infection on the length of embryogenesis.
