

Fig.S1. Auranofin at a high dose induces disruption of cytoskeleton and EC junctions. SVEC were treated with ARF at 2 μ M for 4 h). Cells were subjected to immunofluorescence staining with indicated antibodies followed by Alexa Fluor 488 and 594-conjugated secondary antibodies. **A.** Anti-VEGFR3 and phalloidin staining. **B.** Anti-ZO-1 and anti- β -catenin staining. Scale bar, 20 μ m.
