

S7 Fig. Linear increase in CD25 expression on Tregs in response to increased Proleukin dose. A linear model best describes the Treg CD25 dose response to Proleukin (Day 0-7) (mean baseline measurement of Treg CD25 MFI=6526 (SE=167; range 4576-8270) N=37). [The shaded area presents the 95% confidence interval of the fitted linear model.]
