

SUPPLEMENTARY FIGURES

Supplementary Figure S1: Effects of ART, DHA, and ARTS on cell cycle progression of BEAS-2B. A. Cell cycle analysis was conducted for BEAS-2B with or without ART, DHA and ARTS. B. Percentages of BEAS-2B cells in the G1 phase after treatments with or without ART, DHA and ARTS.

Supplementary Figure S2: ART, DHA, and ARTS through β -catenin-regulated EMT and CSCs of H1299 *in vitro*. Western blot analysis was performed for **A**. Nanog, Sox2, and Oct3/4 and **B**. E-cadherin, N-cadherin, and vimentin. Data showed were the means \pm SD. * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$, compared with the control group.
