Supplementary figures:

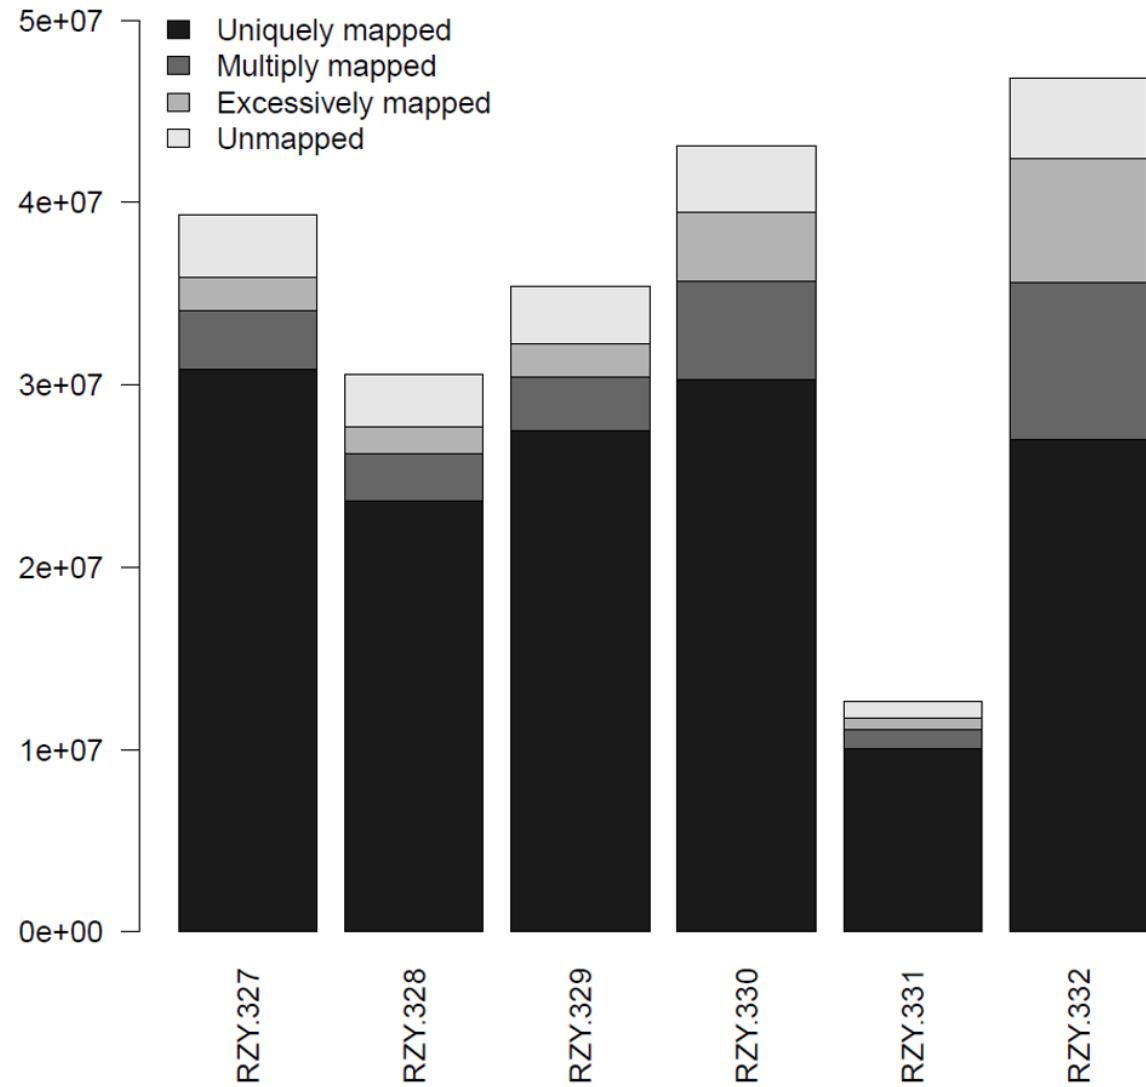

Figure S1: Mapping statistics from STAR for Illumina Hi-sequencing run indicating total reads, uniquely mapped and excessively mapped reads for each of the three independent samples from each feeding group. Low 1-C: RZY.327-329, Control: RZY.330-332.

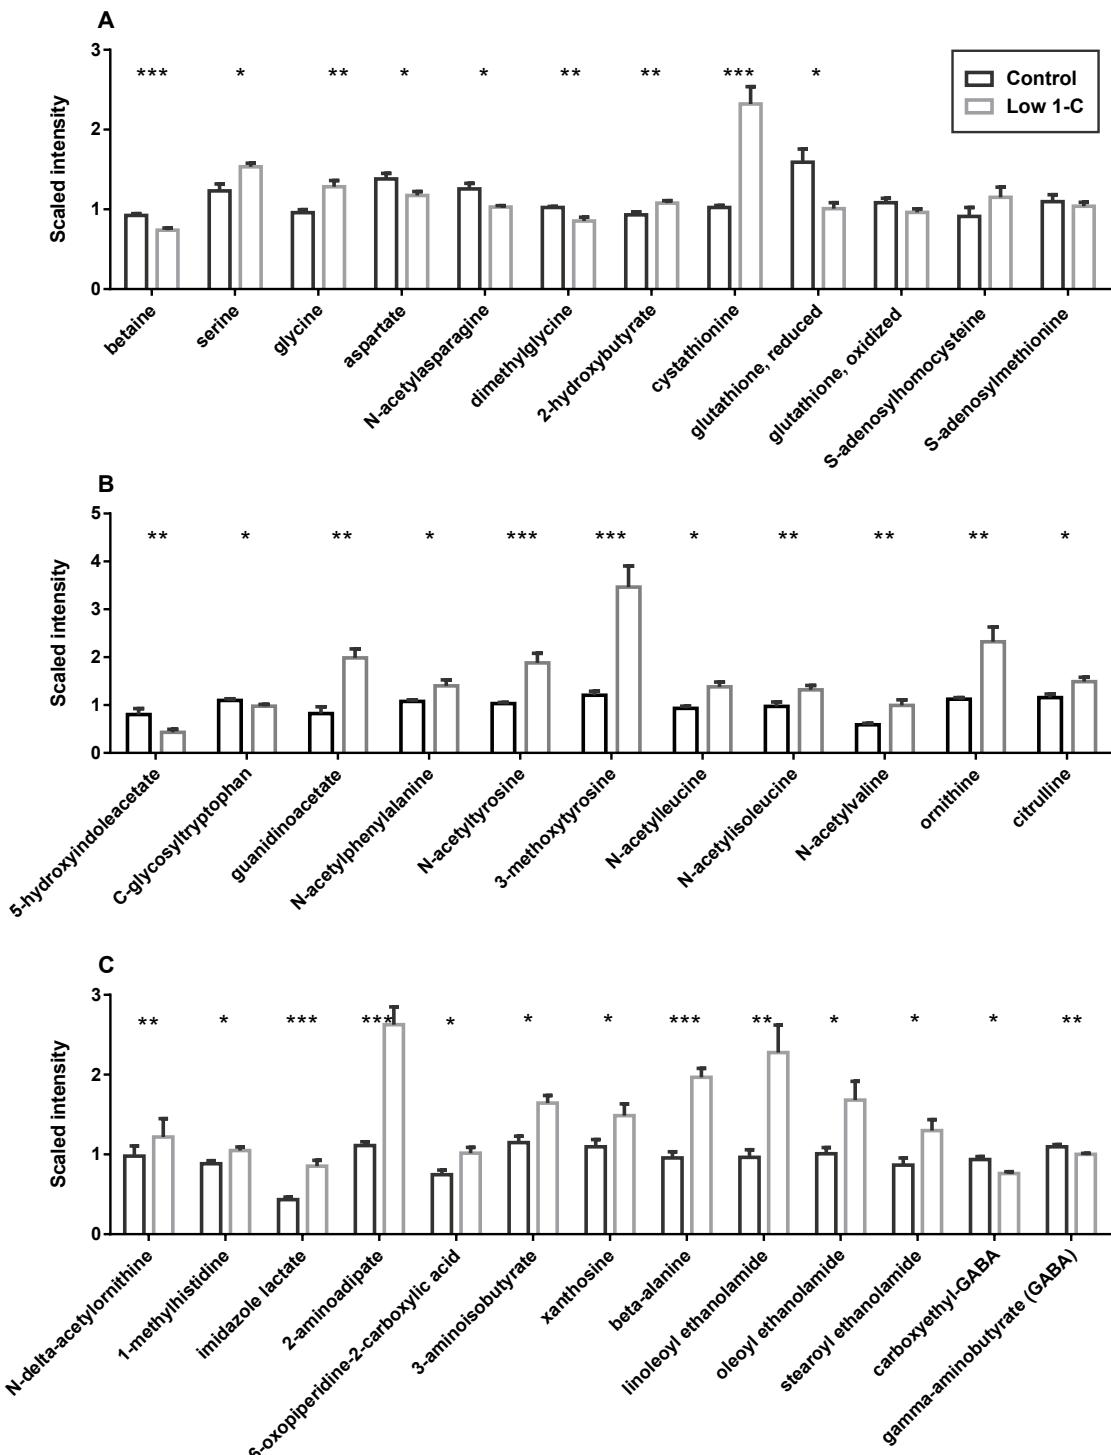

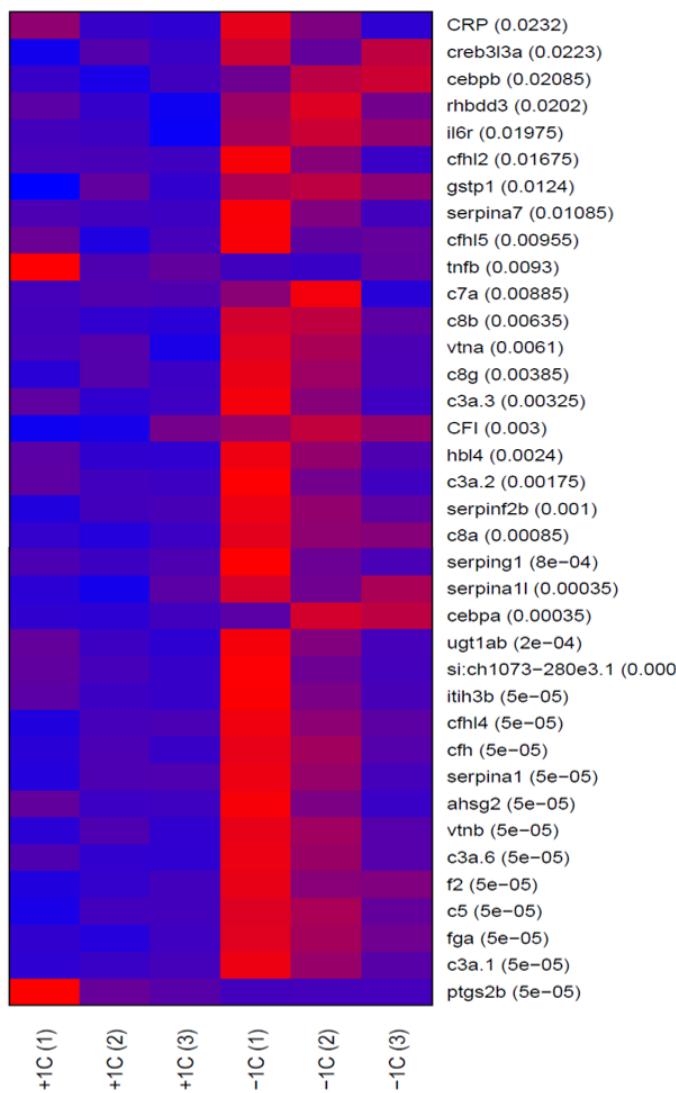

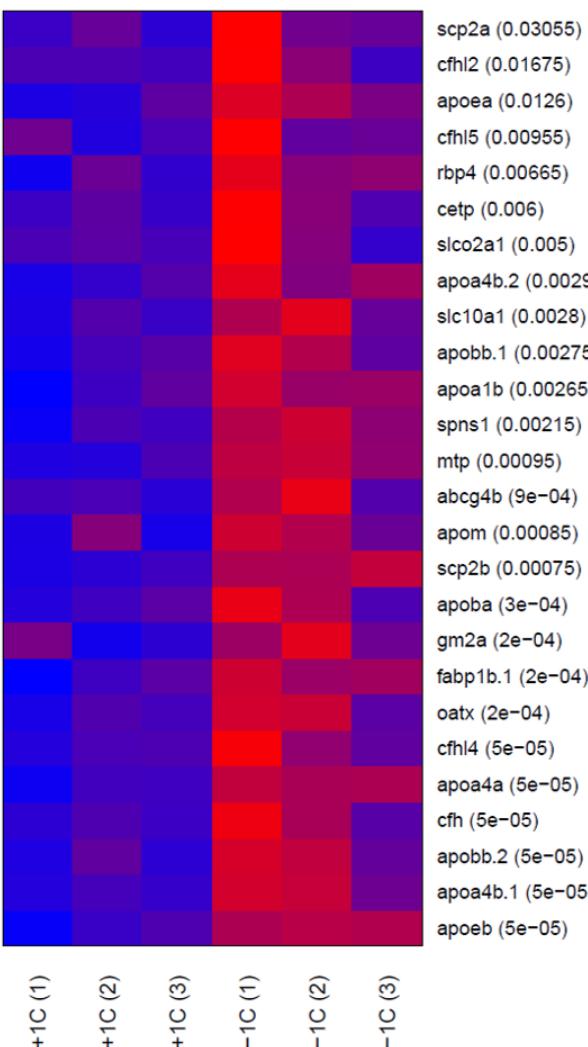

Figure S2: F₀ metabolic profiling of significantly altered metabolites zebrafish (44 DPF) fed control or low 1-C diet. **A:** Scaled intensity of metabolites involved in the 1-C pathway. Oxidized glutathione, S-adenosylhomocysteine, and S-adenosylmethionine were not significantly altered. **B:** Scaled intensity of significantly altered metabolites related to amino acid metabolism and **C:** related to amino acid (continuation from B), endocannabinoid (linoleoyl-, oleoyl- and stearoyl ethanolamide) and neurotransmitter (gamma-aminobutyrate (GABA) and carboxyethyl-GABA) metabolism and regulation. Values represent pooled samples of 20 fish from 6 independent tanks from each diet. Significant differences between feed groups are marked by asterisks (* = p < 0.05, ** = p < 0.01, *** = p < 0.001). For pathway enrichment, fold changes, and q-values see Table S3, for pathway classification network interactions of amino acids, see Fig. 3.

Acute inflammatory response
(35/172 p=6.6e-23)

A

Lipid transporter
(26/114 p=1.1e-18)

One C metabolism genes
(12/47 p=4e-7)

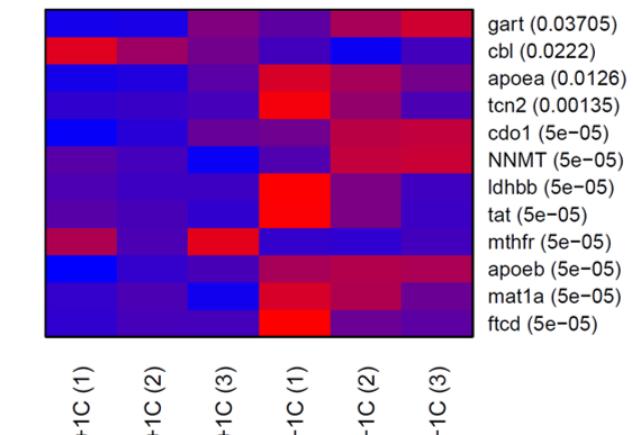

Figure S3: Gene expression of significant GO terms affected from control (+1C) and low 1-C (-1C) F1 embryos. **A:** 35 significantly affected transcripts from the Acute inflammatory response GO term, **B:** 26 significantly affected transcripts from the Lipid transporter GO term **C:** 12 significantly affected transcripts from the 1-C metabolism genes. Expression levels are indicated by colour codes, with blue to red indicating min to max expression level for each gene, respectively. Each row of the heat map with its given gene name ID displays gene expression level of differentially expressed genes. P-values are indicated next to the gene names.

Oxidation-reduction process (119/1148 p=6.6e-25)

Figure S4: Significantly affected transcripts in low 1-C embryos compared to control embryos from the oxidation-reduction process GO term. In total 119 transcripts were differentially expressed in control (+1C) and low 1-C (-1C) F1 embryos. Expression levels are indicated by colour codes, with blue to red indicating min to max expression level for each gene, respectively. Each row of the heat map with its given gene name ID displays gene expression level of differentially expressed genes. P-values are indicated next to the gene names.

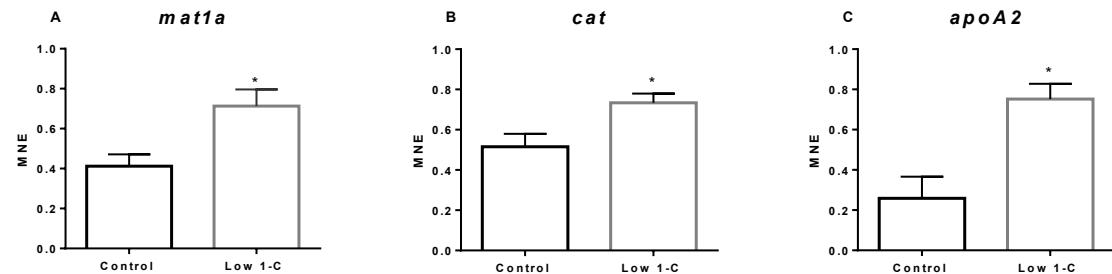

Figure S5: RNA sequencing verification by RT-qPCR. mRNA levels presented as mean normalized expression (MNE) in control embryos versus low 1-C embryos. MNE of target genes are normalized against *ef1a* and *tuba1* as reference genes. All data points presented are the means \pm SD of 3 independent groups (egg incubation groups originating from independent parents from different feeding tanks) of 30 embryos at 26 somite stage. Significant differences are marked by asterisk ($*$ = $p < 0.05$). Gene abbreviations, name and accession number are given in table S2.

N: total number of detected metabolites (566), n: total number of metabolites affected by the diet (48), M: number of detected metabolites of main pathway, m: number of detected metabolites of sub pathway, K: number of metabolites affected by diet in main pathway, k: number of metabolites affected by diet in sub pathway. The diet effect is indicated as fold changes, positive and negative values indicate higher and lower intensity in low 1-C group than control, respectively ($\log_2(\text{low 1-C}/\text{ctrl})$). Q-values < 0.1 are indicated with bold metabolite name.
