

571

572 **Supplementary Fig. 1.** (a) Effect of isoproterenol (1  $\mu$ M) on proliferation of control,  
573 shADRB2a and shADRB2b tumor cells ( $n = 3$ ). Data represent mean  $\pm$  standard error.

574

575 **Supplementary Fig. 2.** (a) Fold change in proportion of tumor cells that exhibit  
576 mesenchymal-like morphology (defined by cell roundness  $< 0.5$ ) in response to treatment

577 with isoproterenol (non-selective  $\beta$ AR-agonist, ISO, 1  $\mu$ M) after pretreatment with ICI-  
578 118,551 ( $\beta_2$ AR-selective antagonist, 1  $\mu$ M) ( $n = 5 - 6$ ). (b) Representative images of  
579 mesenchymal-like cells (roundness  $< 0.5$ ) highlighted in orange, in cultures of scramble  
580 control, shADRB2a, shADRB2b cells after treatment with 1  $\mu$ M ISO and 1  $\mu$ M ICI-118,551.  
581 Scale bar:100  $\mu$ m. Data represent mean  $\pm$  standard error.
