Running Title: Indispensable Contribution of s36 Protein to Chorion Morphogenesis

c355>eGFP,s36_RNAi

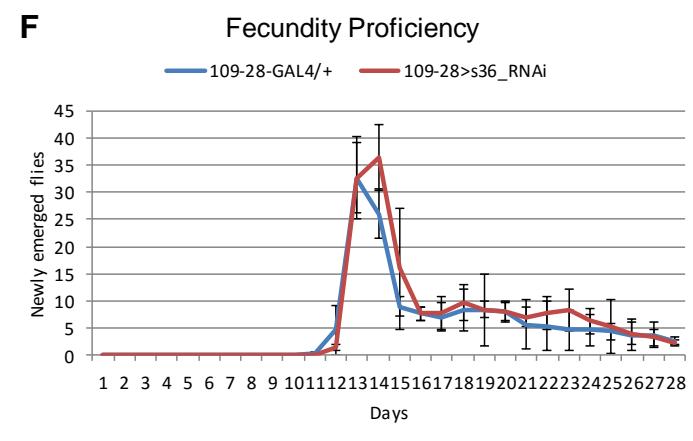

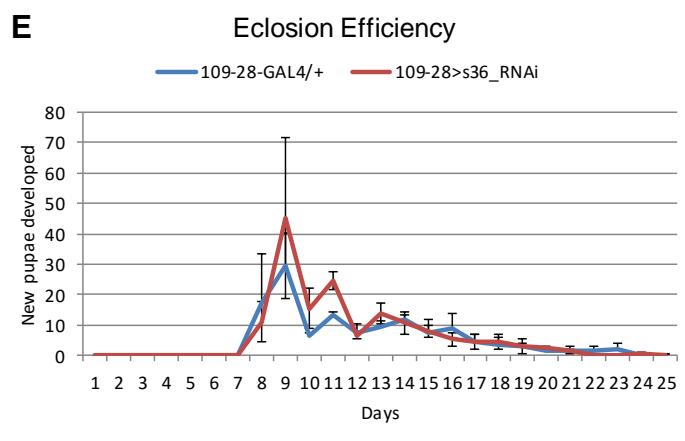

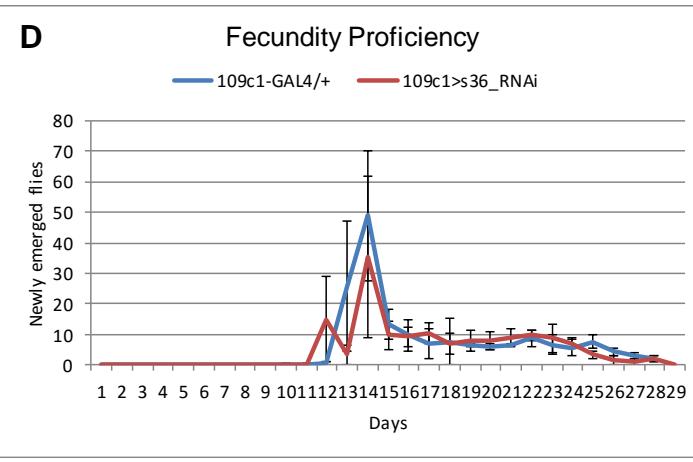

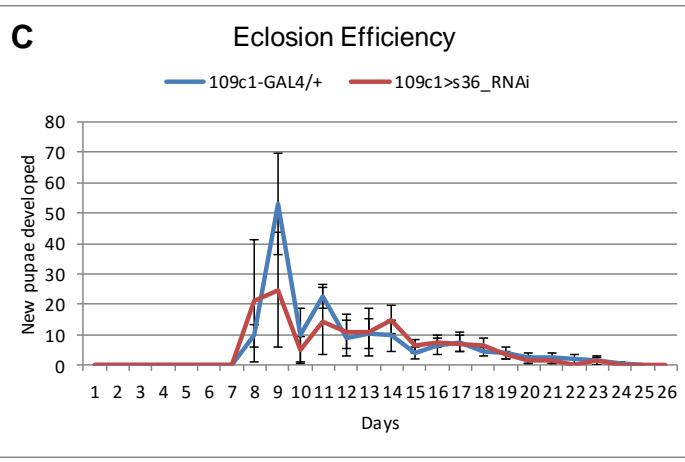

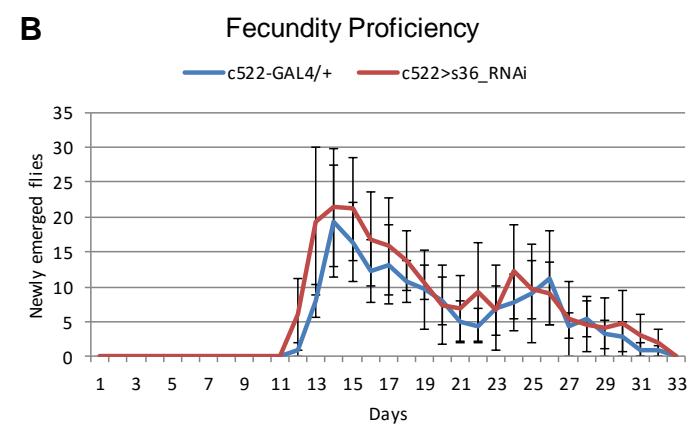

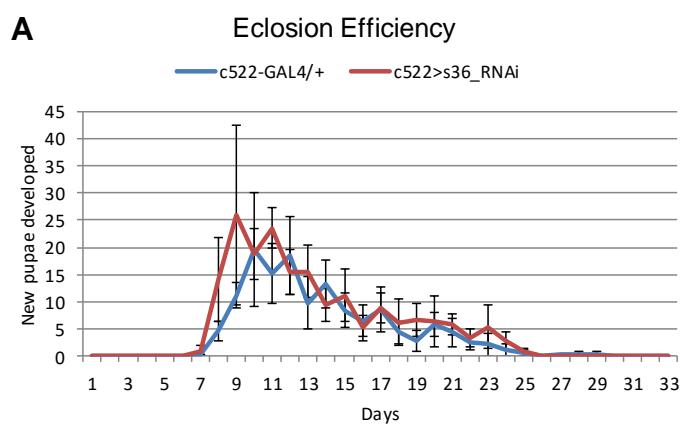

c355>s36_RNAi

Supplementary Figure S1

The developmental courses of follicle- and nurse-cell clusters remain unaffected in the absence of s36 chorionic protein. (A-D) Confocal laser scanning microscopy (CLSM) images of eGFP-protein expression profiling in the s36-depleted follicle-cell cluster of triple transgenic (*c355>eGFP,s36_RNAi*) ovarian follicles at developmental stage 10 (A), 13 (B) and 14 (C and D). (E-H) CLSM imaging of PI nuclear staining of follicle- and nurse-cell compartments in the s36-targeted follicles (*c355>s36_RNAi*) at developmental stage 10 (E), 12 (F), 13 (G) and 14 (H). Scale Bars: 50 μ m.

Supplementary Figure S2

Genetic targeting of s36 chorionic protein in regionally specialized follicle-cell subpopulations does not harm typical eclosion capacity and fecundity integrity.

Eclosion-efficiency (A, C and E) and fecundity-proficiency (B, D and F) graphs of flies being targeted for the s36 chorionic protein specifically in follicular border cells ($c522>s36\text{-RNAi}$) (A and B), (anterior and posterior) polar cells ($109c1>s36\text{-RNAi}$) (C and D), or follicle cells of dorsal appendages ($109\text{-}28>s36\text{-RNAi}$) (E and F). Note the significant similarities with their respective control ($c522\text{-GAL4}/+$, $109c1\text{-GAL4}/+$ and $109\text{-}28\text{-GAL4}/+$) fly strains.

Gene Name	Primer Sequence	Molecular Size (bp) of PCR Product	T _a
Chorion protein 36 (CG1478)	F: 5'-CAA CTC GGT CTC TGG TTT GG-3'	195	57°C
	R: 5'-CTG TGA GGC GAT CTG ATT GG -3'		
Chorion protein 38 (CG11213)	F: 5'-CGA GAT CGA CCT ACA TTT G-3'	213	53°C
	R: 5'-ATT CGA GAG CAC CAG CAC C-3'		
Chorion protein 18 (CG6517)	F: 5'-GCC AAT GTG GGA TCT CAG TA-3'	195	55°C
	R: 5'-GCT GTG TCC GTA CTC CTG GT-3'		
Chorion protein 16 (CG6533)	F: 5'-AAG CTG GAC GGT GCT GAC T-3'	201	53°C
	R: 5'-GGT CTT CAG GTA CGC ATT C-3'		
Chorion protein 19 (CG6524)	F: 5'-GCT ACA ACG GTG GCA ACT A-3'	196	53°C
	R: 5'-CCA TAC TGG TTC TCT GGG A-3'		
Chorion protein 15 (CG6519)	F: 5'-AGG TTA TGG TGG TGG CTA CG-3'	190	55°C
	R: 5'-CTT GTA GGT TCC GGG ATT CA-3'		

Supplementary Table S1

Gene name, oligonucleotide primer sequence (F: forward; R: reverse), molecular size (bp) and annealing temperature (Ta) of the amplified PCR products for the herein examined genes

Supplementary Table S2 (a separate Microsoft Excel format file)

Protein library ($N = 2,131$ members) of s36-depleted fly ovaries (c355>s36_RNAi) indicating for each identified protein its: (a) UniProt accession number, (b) name and description together with fundamental features of LC-MS/MS proteomics analysis, such as (c) (Mascot) score, (d) sequence coverage, (e) number of unique peptides ($n = 17,772$ tryptic fragments), (f) number of amino-acid residues (AAs), (g) molecular weight (MW) in kDa and (h) (calculated) isoelectric point (pI)
