

A**B****Figure S1****Developmental RU486 exposure is toxic to animals inheriting *elav-GS* paternally**

A) Pupal number is shown for animals inheriting indicated transgenes paternally and exposed developmentally to vehicle or to indicated RU486 concentrations. Mean \pm SEM is shown; * $p < 0.01$, for comparisons to vehicle control. Data are averaged from two independently derived *elav-GS*, *UAS-dcr2* recombinant lines.

B) Side view photographs of vials containing progeny bearing indicated transgenes inherited paternally. Photographs were taken 10 days after crosses were initiated.
