**Supplementary Figure 1:** Whole plate overview of oligo probe in situ hybridization results for each marker depicted in *Figure 1D*.

Supplementary Table 2: GO categories for top 50 genes

**Summary**

Gene ontology term analysis by GO-Molecular Function revealed 16 of the candidate genes to be involved in transmembrane signaling transducer activity ( $p = 0.00016$ ), 6 of which had G-protein coupled peptide receptor activity ( $p = 3.45e-05$ ). When categorizing by GO-Biological Process, 17 genes were enriched in the category behavior ( $p = 1.53e-10$ ) and 8 in axon guidance ( $p = 4.88e-06$ ). A total of 15 genes were enriched in intrinsic component of the plasma membrane ( $p = 3.96e-05$ ) and 14 in the synapse ( $p = 4.62e-08$ ) by GO-Cellular Component.

Classification with Princeton Generic Gene GO Term Finder (Princeton University, USA; <http://go.princeton.edu/cgi-bin/GOTermFinder>) with mus musculus (MG) as annotation background. Three separate queries were carried out for categorization according to molecular function (GO-MF), biological process (GO-BP) and cellular component (GO-CC).

**Input list**

Zic2, Six3, Serpinf1, Fign, Cdhl2, Eph4, Ly96, Fkbp10, Accn4, Fbln1, Tmem90b, Gbx2, Clec1a, Adra1b, Lgi1, Mcc, Fam167a, Gpr52, Slit2, Csf2rb, Gabrq, Chrn3, Sdc2, Scg2, Fgf10, Kcng3, Gch1, Ret, Necab1, C1302120Rik, Kcnk9, Vwa5b1, Oprk1, Cckar, Cbln4, Lmx1a, Gpr98, Avpr1a, Fst, Nmu, Tacr3, Ntf3, Gpr83, Crisp1, Nrp2, Mc3r, Trpv1, Gsb8, Chrn2, Grp

**Molecular function**

Gene Ontology term	Cluster frequency	Genome frequency	Corrected P-value	FDR	false positives	Genes annotated to the term
