

S9 Fig. Relative expression levels of rice GA biosynthesis-related and signal transduction-related genes in young NIL-*GNP1*^{LT} and NIL-*GNP1*^{TQ} panicles (~1 cm) at early panicle initiation to booting stage.

Values are means \pm s.d. (n = 4, each with 6 plants). Asterisks represent significant difference determined by Student's t-test at p -value < 0.001 (***), p -value < 0.01 (**), not significant (n.s.).
