

Figure e-1. Schematic of subjects meeting inclusion/exclusion criteria (N each)

Variable	N	Mean	Miss
PF-10 physical functioning index (0-100)	95	48.25	7
BP pain index (0-100)	77	65.88	25
GH general health perceptions (0-100)	77	55.14	25
MCS standardized mental health component scale	59	52.25	43
MH mental health index (0-100)	77	75.14	25
PCS standardized physical component scale	59	34.44	43
RE role emotional (0-100)	77	71.87	25
RP role physical (0-100)	77	39.61	25
SF social functioning (0-100)	77	70.62	25
VT vitality index (0-100)	77	44.28	25

Table e-1. Comparison of NHS subjects with MS with data fulfilling inclusion criteria and included in the PF10 analyses, versus individuals not in the PF10 analyses.

	Not included N=42-148	Included N=89-95	p-value	N=0	N=1
Age (years)*	56.1 (3.0)	56.5 (3.7)	0.49	52	95
BMI (kg/m ²)*	25.8 (5.0)	26.0 (5.2)	0.74	50	90
Smoking (pack-years)*	18.0 (17.9)	11.6 (15.7)	0.03	52	93
MS duration (years)*	9.4 (6.9)	9.2 (6.1)	0.89	52	95
BMI age 18 (kg/m ²)*	21.6 (3.0)	22.2 (3.2)	0.16	129	89
Vitamin D intake (IU/day)*	250.5 (361.9)	235.4 (248.4)	0.81	42	92
Ancestry					
<i>Caucasian - other (%)</i>	54.0	61.0	0.28	148	95
<i>Southern European (%)</i>	13.5	12.6	0.84	148	95
<i>Scandinavian (%)</i>	6.1	5.3	0.79	148	95
<i>Other (%)</i>	26.4	21.1	0.35	148	95
Latitude of residence at age 15					
<i>North (%)</i>	45.3	44.2	0.87	148	95
<i>Middle (%)</i>	37.2	40.0	0.66	148	95
<i>South (%)</i>	2.0	7.4	0.04	148	95
<i>Missing (%)</i>	15.5	8.4	0.1	148	95
Premenopausal physical activity (METs/week)	9.9 (12.6)	8.8 (11.2)	0.62	40	90
Time since menopause (years)	5.8 (1.8)	6.1 (1.9)	0.46	52	95
Menopause type					
<i>Natural (%)</i>	45.8	63.2	0.008	153	95
<i>Bilateral oophorectomy (%)</i>	21.6	10.5	0.03	153	95
<i>Other surgical (unilateral/no oophorectomy) (%)</i>	13.1	26.3	0.009	153	95
Current HT user**	62.5	64.2	0.88	24	95

*At first post-menopausal assessment. Values are means (SD) or percentages and are standardized to the age distribution of the study population.

**HT use was categorized as systemic, estrogen based, for at least 12 months, vs. never use.

Base Model: Generalized linear regression adjusted for age, MS duration, time since menopause, and menopause type. Additional models adjusted for BMI (body mass index), smoking (packyears), ancestry, latitude of residence at age 15, BMI at age 18, supplemental vitamin D intake, and METS.

SF-36 subscales: BP (bodily pain), GH (general health perceptions), MH (mental health), RE (emotional role functioning), RP (physical role functioning), SF (social role functioning), VT (vitality), PF (physical function), MCS (mental composite score), PCS (physical composite score).

* HT use was categorized as systemic, estrogen based, for at least 12 months, vs. never use. The estimate provided represents the increase in physical function measure observed if HT use = 1.

** HT use was measured continuously in months. The estimate provided represents the increase in physical function measure observed for each additional month of systemic, estrogen based, HT use. To obtain the estimate of effect over 1-year, multiply the beta-estimate by 12.

Table e-3. Association between HT use* and PF10 at first postmenopausal assessment in women without an MS diagnosis.

	NATURAL + SURGICAL MENOPAUSE		
	N	β Estimate	p-value
Model 1 (age-adjusted)	31,935	0.5	0.02
Model 2 (adjusted for age and menopausal factors)	31,935	1.0	<.0001
Model 3 (fully adjusted)	31,935	-0.8	0.0003

Models: Generalized linear regression.

Model 1: adjusted for age.

Model 2: adjusted for age, time since menopause, and menopause type (natural, bilateral oophorectomy, other surgical).

Model 3: adjusted for Model 2 + *as well as*: ancestry, pack-years of smoking, vitamin D intake, BMI at PF10, BMI age 18, latitude age 15, and premenopausal physical activity.

* HT use was categorized as systemic, estrogen based, for at least 12 months, vs. never use. The estimate provided represents the increase in PF10 observed if HT use = 1.
