

S1 Table. Leaf length and leaf width of *Oryza* species.

The average leaf blade length (LL) and leaf width (LW) are computed taking nine leaves per species ($N = 9$) from three different plants. The length is measured from base to tip and the width is measured at the middle of the leaf. Leaf types (described in the Result section) are mentioned for each *Oryza* species.

Genome	<i>Oryza</i> species	IRGC accession number	Leaf length (LL***, cm)	Leaf width (LW***, cm)	Category
KKLL	<i>O. coarctata</i>	104502	30.44±2.01 (lm)	0.68±0.08 (no)	Short-narrow
HHKK	<i>O. schlechteri</i>	82047	15.11±1.83 (q)	0.52±0.1 (o)	Short-narrow
HHJJ	<i>O. longiglumis</i>	105148	32.22±2.86 (l)	1.53±0.09 (fg)	Short-wide

*** Represents significant difference among the species for the trait at $P<0.001$.

N = 9 Different letters suggest significant differences.
