

Supplementary Table 5. Discriminant validity summary.

MHRM scores were compared between age, education or disease duration categories, using unpaired t-tests – p-value (p) is reported.

Age	Older than 50 years old (n=46)	50 years or younger (n=49)	p
MHRM-original (mean ± SEM)	72.2 ± 13.7	77.2 ± 16.4	0.1
MHRM-revised (mean ± SEM)	46.4 ± 11.7	52.2 ± 12.6	0.02
Education	Primary or less (n=48)	Higher than primary (n=47)	p
MHRM-original (mean ± SEM)	71.2 ± 13.9	78.4 ± 15.8	0.02
MHRM-revised (mean ± SEM)	45.7 ± 11.7	53.1 ± 12.2	0.003
Duration of disease	More than 20 years (n=58)	20 years or less (n=37)	p
MHRM-original (mean ± SEM)	71.2 ± 13.6	80.5 ± 16.1	0.003
MHRM-revised (mean ± SEM)	46.2 ± 11.4	54.4 ± 12.5	0.001
