Supplementary Figure S1: A. E47 induces apoptosis in KM-H2-pRTS cell. KM-H2 cells stably expressing empty pRTS-GFP vector or pRTS-E47 were incubated in the presence of doxycycline (0.5 μg/mL) for 4 days. Cell death was measured with help of annexin V-PE/7-AAD staining. A representative one of three independent experiments yielding similar results is shown. * p<0.05 as it was assessed by double sided T-test. B. A representative fluorescence plots of annexin-V/7-AAD staining.
