

Figure S4. Qualifying *C. albicans* 72 h *ira2* Δ/Δ biofilm susceptibility as compared to BWP17 biofilms. Seventy two hour *C. albicans* biofilms of *ira2* Δ/Δ and BWP17 strains were exposed to 32 μ g/ml of Caspofungin (CAS), Fluconazole (FLC), Ketoconazole (KTC), Voriconazole (VOR), or 4 μ g/ml amphotericin B (AMB) for 24 h. Biofilms were solubilized in 1 ml of PBS and an amount of 3 μ l from the solution was spotted on SDA agar and incubated at 30 °C for 48 h. Viability of the biofilm cells were recorded for each antifungal tested.
