"Active" is defined as those who attended more than one ANC facility

A total of 10 values for the 6-point quality index are missing because at least 1 value within the index was missing.

P-values are from ordinary least squares regressions with the dependent variable indicated in Column 1 regressed on a constant term and a binary variable for "Active" and test whether the coefficient on "Active" is significantly different from zero, separately for each visit number.

Robust standard errors are adjusted for clustering at the neighborhood level.

The variable for ANC facility utilized ranked as highest quality was only asked to respondents who received the full baseline and midline surveys (First visit: n=291; Second visit: n=287; Third visit: n=263; Fourth visit: n=198)

Missing values across all 4 visits (n=1431) per variable: ANC at private facility (35); ANC facility in neighborhood (35); quality index (46); excellent services (39); ANC facility highest quality ranking (23); ANC facility offers delivery services (39); delivery facility at facility utilized for ANC (37).
