

Supplemental Figure 9

Supplemental Figure S9: Titration of HPI RNA by Mg²⁺

Overlays of regions of ¹H-¹³C HSQC spectra showing the aromatic H8-C8 and H2-C2 of selectively labeled [¹³C/¹⁵N-A] HPI at 30°C, Mg²⁺-free (black) and with 3 mM magnesium. Arrows indicate the cross-peaks that shifted upon addition of magnesium.
