

SUPPLEMENTAL FIGURE LEGEND

Figure 1S. Tumor growth ratio over a 14 day-period demonstrated marked suppression of tumor growth by $^{188}\text{Re-MEM-238}$ (Group 1). However, the time course did not allow for differentiation between the non-specific control $^{188}\text{Re-MOPC21}$ mAb (Group 2), unlabeled mAb (Group 3) and untreated tumors (Group 4).

Figure 2S. Whisker plot demonstrating 24-day Tumor Growth Ratios (TGR) as a function of treatment. The ranges for TGR of each treatment arm demonstrate minimal overlap between tumors treated with $^{188}\text{Re-MEM-238}$ (Group 1) and those treated with $^{188}\text{Re-MOPC21}$ (Group 2). Tumors treated with unlabeled MEM-234 (Group 3) and untreated tumors (Group 4) yield values that occupy similar ranges and do not overlap with $^{188}\text{Re-MEM-238}$ (Group 1).
