

Figure S2. Morphology of a *flo11* (Flo11⁻) mutant compared to wild type Σ1278b, *sfl1* (Flo11⁺) and *flo8* (Flo11⁻). Inoculations were made with 500 cells in the center of semisolid complex medium plates (9 cm Ø, 0.3% agar, YPD), which were grown for seven days at room temperature. Morphology and size of *flo11* and *flo8* colonies were similar.
