

Figure S1. Secondary analysis of HbA1c changes in all 6-year completers ($n = 136$) and those not on additional glucose-lowering medications ($n = 78$). LSM \pm SE changes from baseline in HbA1c by ANCOVA. * $P < 0.05$ for change from baseline. ANCOVA, analysis of covariance; HbA1c, glycated hemoglobin; LSM, least-squares mean; SE, standard error.
