Supplementary Materials

Supplementary Figures

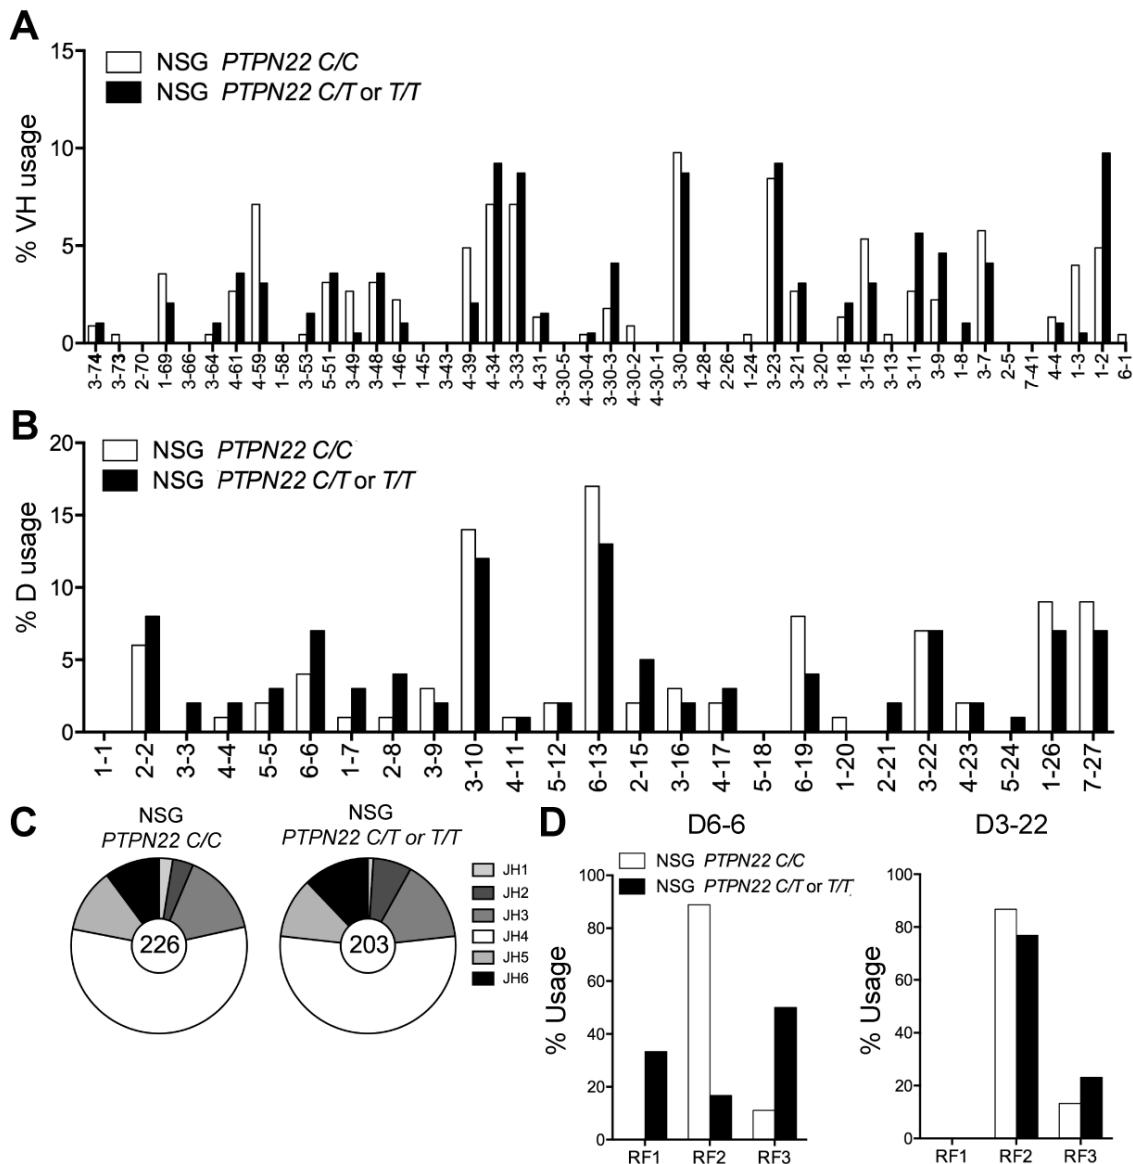

Figure S1: New emigrant B cells isolated from NSG mice engrafted with *PTPN22* C/T or T/T HSCs display normal IgH repertoire.

VH (**A**), *D* (**B**) and *JH* (**C**) gene-usage frequencies in new emigrant B cells are represented for 7 NSG mice engrafted with *PTPN22* C/C HSCs and 6 NSG mice

engrafted with *PTPN22* C/T or T/T HSCs. Sequences from 226 NSG *PTPN22* C/C and 203 NSG *PTPN22* C/T or T/T single transitional B cells were pooled. (**D**) Reading frame (RF) usages for the *D6-6* and *D3-22* genes are compared between new emigrant/transitional B cells from 7 NSG mice engrafted with *PTPN22* C/C HSCs and 6 NSG mice engrafted with *PTPN22* C/T or T/T HSCs.

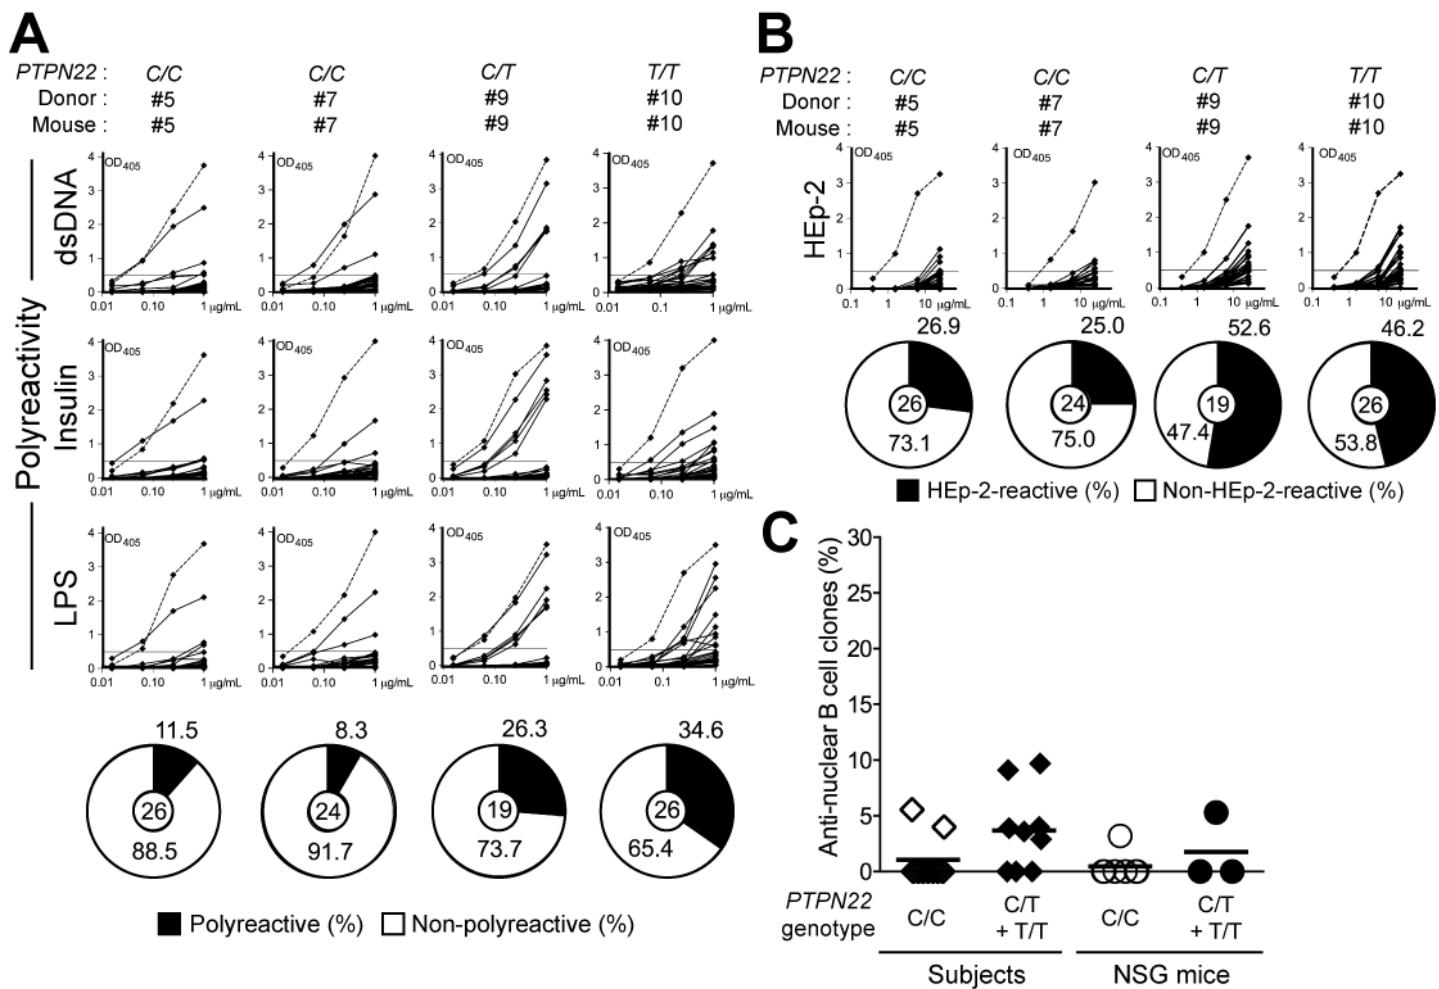

Figure S2: Defective central B-cell tolerance in humanized mouse engrafted with HSCs carrying *PTPN22* T allele(s).

The frequencies of polyreactive (**A**) and HEp-2 reactive (**B**) new emigrant B cells from different types of humanized mice transplanted with indicated HSCs were determined and compared to those of healthy donors carrying or not *PTPN22* T allele(s). Dotted line shows positive control. For each B-cell fraction, the frequency of reactive (filled area) and non-reactive (open area) clones is summarized in pie charts with the total number of clones tested indicated in the center. (**C**) The frequencies of antinuclear new emigrant B cells are compared between mouse engrafted with HSCs carrying or not the *PTPN22* T allele.

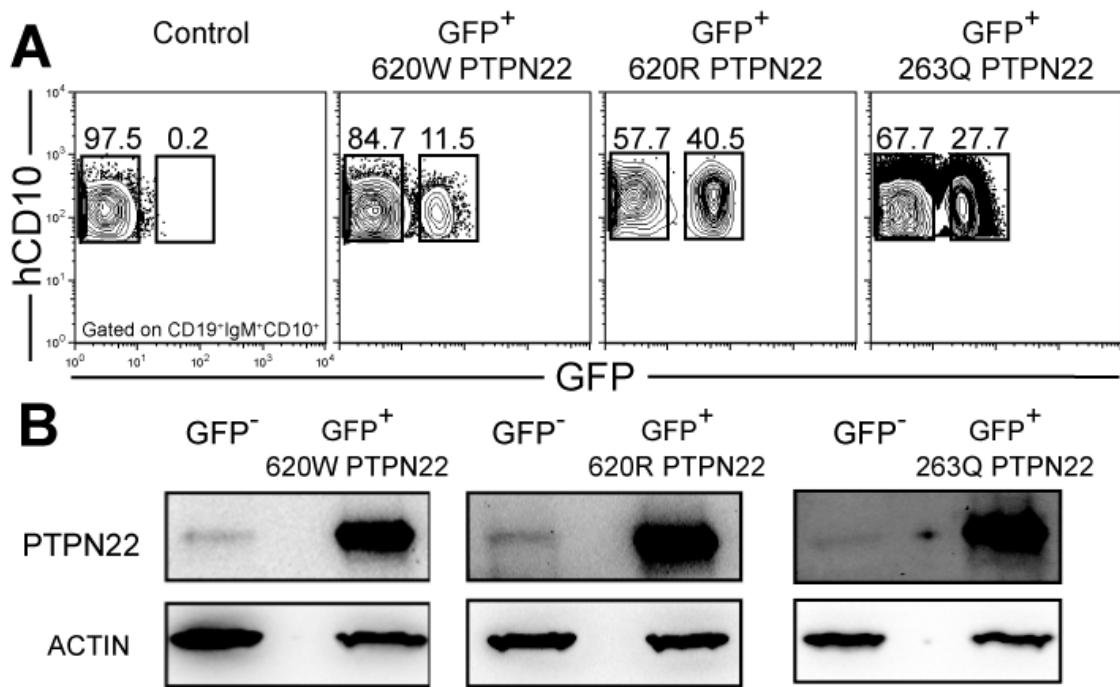

Figure S3: Overexpression of PTPN22 variants in NSG mice.

(A) Representative flow cytometry analysis of CD19⁺ cells isolated from the spleen of NSG mice engrafted with HSCs transduced with a GFP-tagged lentivirus expressing 620W PTPN22, 620R PTPN22 and 263Q PTPN22. CD19⁺ were stained with anti-hCD19, anti-IgM and anti-hCD10 antibodies. The frequencies of GFP⁻ and GFP⁺ shRNA⁺ new emigrant B cells are shown. (B) Western Blot analysis of PTPN22 protein expression in hCD19⁺ B cell isolated from PTPN22 620W, 620R or 263Q NSG mice. β-actin is used for normalization of protein expression

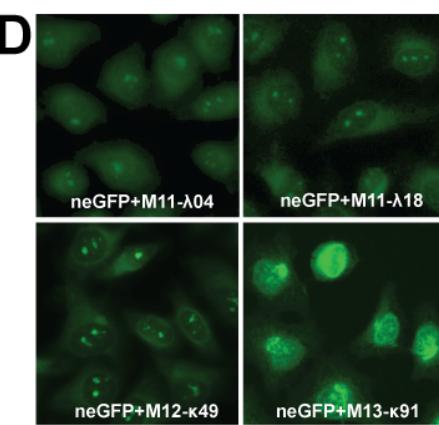

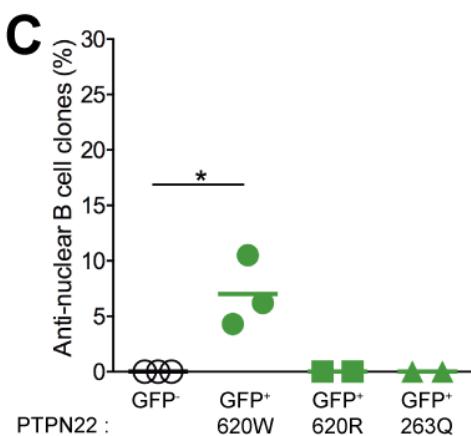

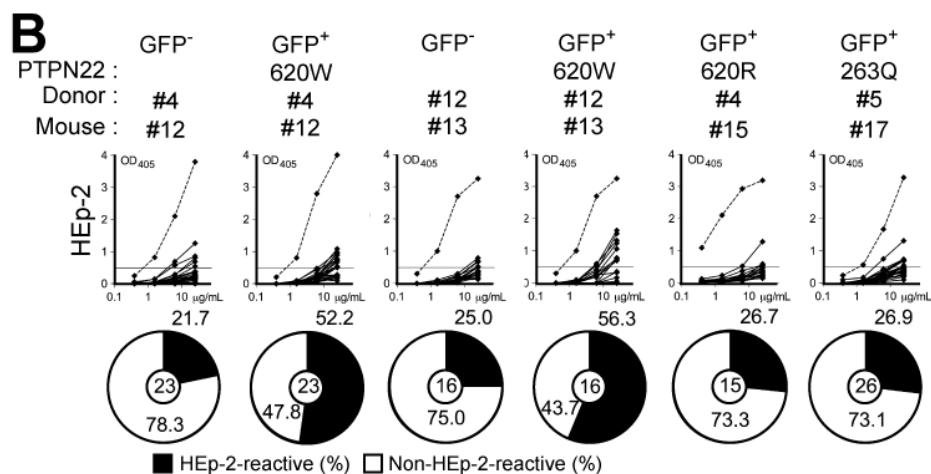

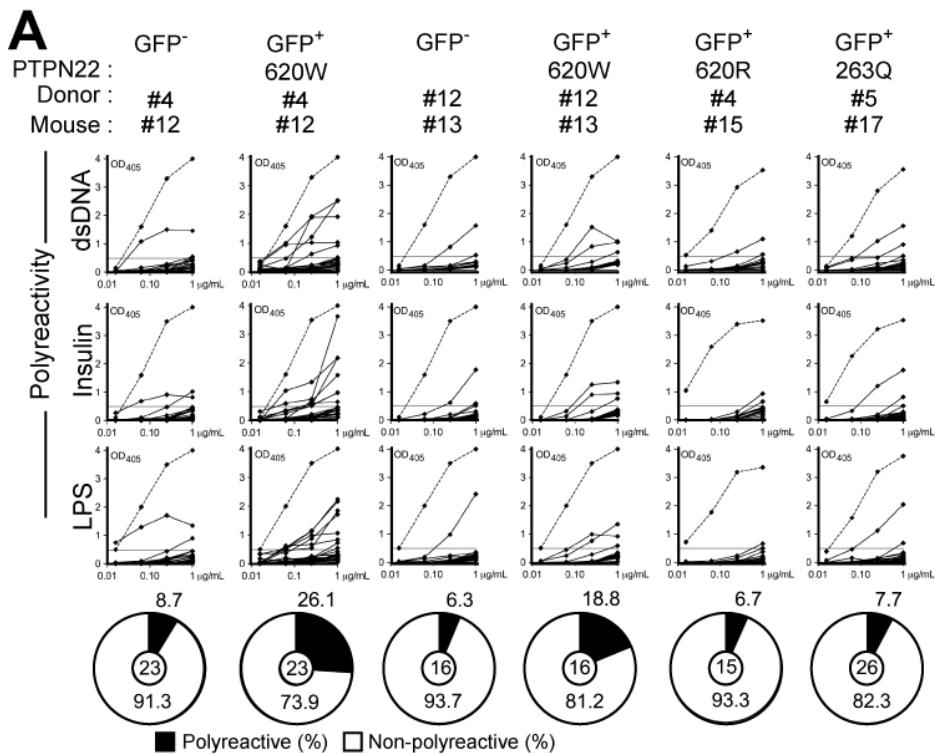

Figure S4: 620W PTPN22 overexpression interferes with the central B cell tolerance checkpoint.

The frequencies of polyreactive (**A**) and HEp-2 reactive (**B**) new emigrant B cells from sorted GFP⁺ fractions expressing 620W PTPN22, 620R PTPN22 or 263Q PTPN22 were determined and compared to those of GFP⁻ new emigrant B cells. Dotted line shows positive control. For each B-cell fraction, the frequency of reactive (filled area) and non-reactive (open area) clones is summarized in pie charts with the total number of clones tested indicated in the center. (**C**) The frequencies of antinuclear new emigrant B cells are compared between GFP⁻ and GFP⁺ few emigrant B cells expressing 620W PTPN22, 620R PTPN22 or 263Q PTPN22. (**D**) Autoreactive antibodies from GFP⁺ 620W PTPN22 expressing new emigrant B cells show various patterns of anti-nuclear HEp-2 staining. Original magnification, ×40. Statistically significant differences are indicated * P ≤ 0.05.

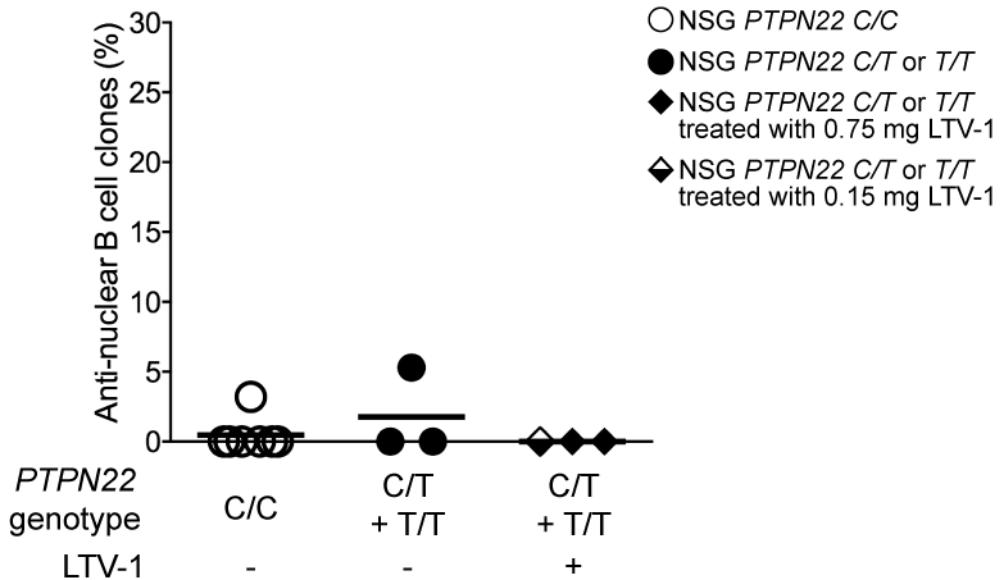

Figure S5: Frequencies of anti-nuclear new emigrant B cells in *PTPN22 C/T or T/T* NSG mice treated with the LTV-1 PTPN22 inhibitor.

Anti-nuclear frequencies are compared between the *PTPN22 C/T or T/T* NSG mice treated or not with 0.75 mg or 0.15 mg of LTV-1 PTPN22 inhibitor. Each symbol represents a mouse and horizontal bars denote means.

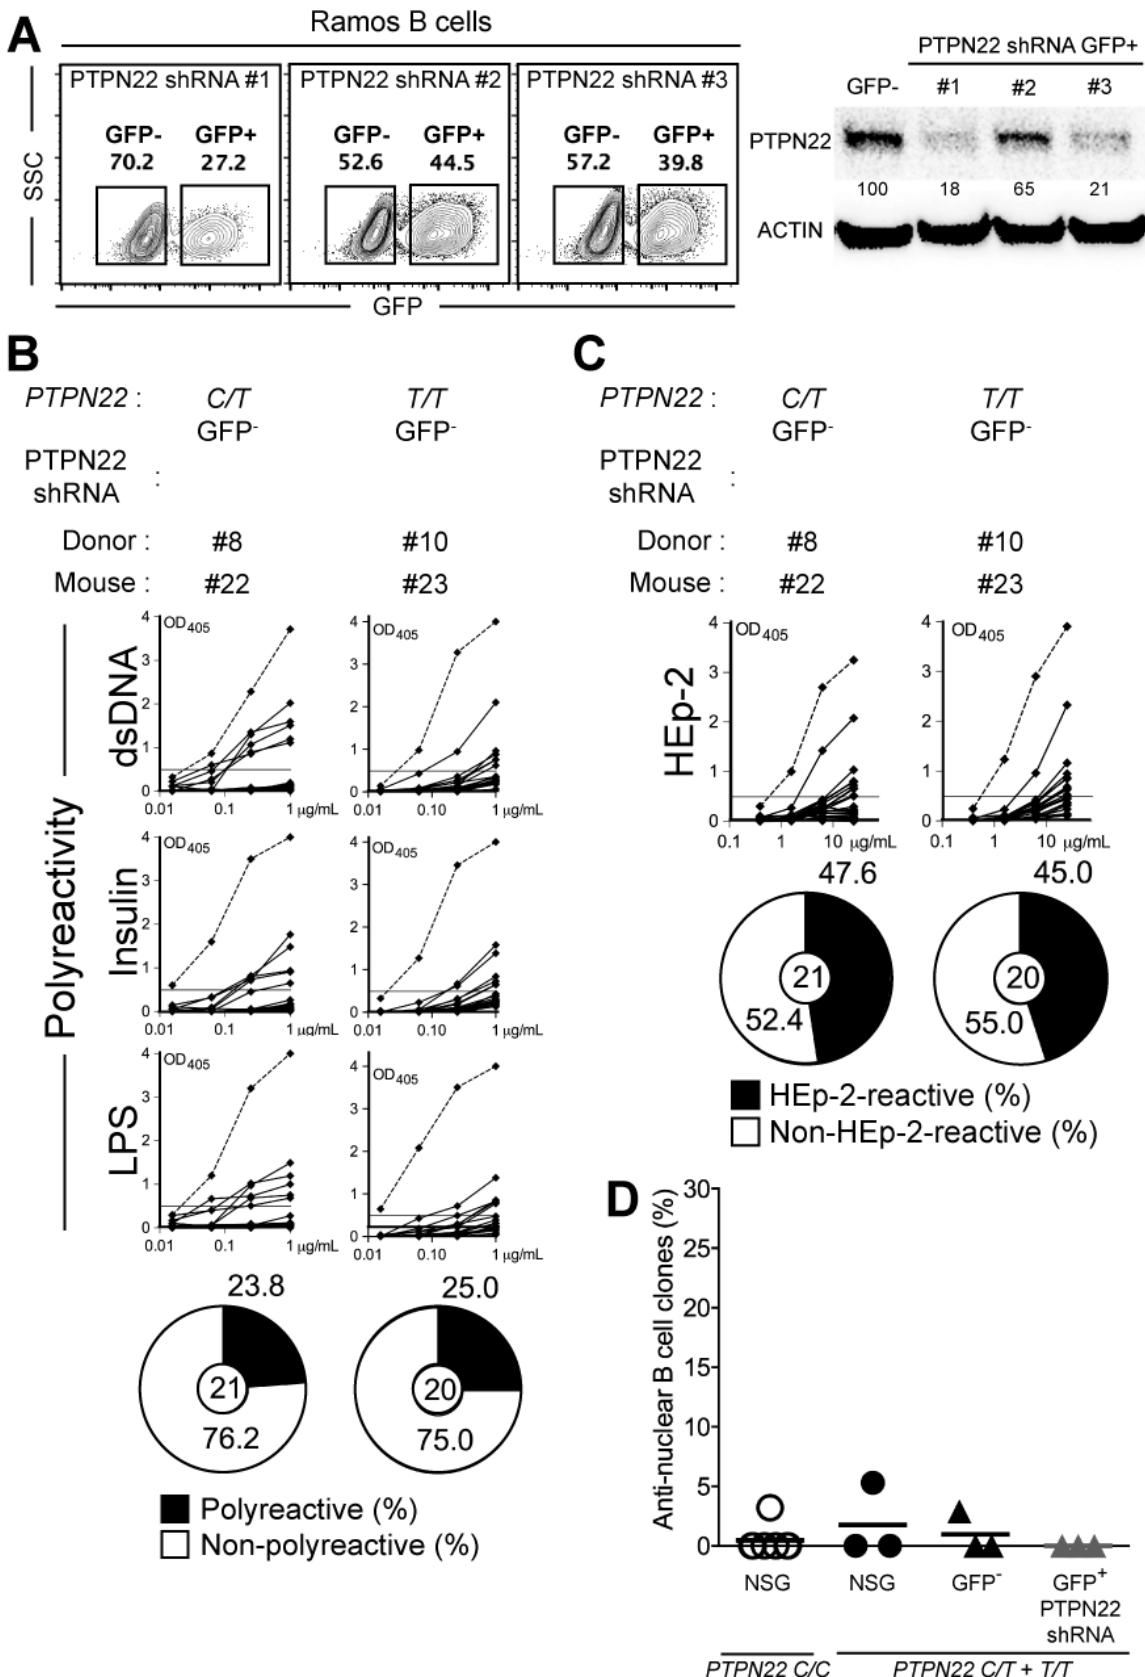

Figure S6: Inhibition of PTPN22 expression during B cell development resets central B cell tolerance.

(A) Flow cytometry analysis of Ramos B cells transduction efficiency. Ramos B cells were transduced with three different GFP-tagged shRNA PTPN22 expressing lentiviruses and probed for GFP expression. Right panel shows PTPN22 protein expression in GFP⁻ and GFP⁺ shRNA⁺ Ramos B cells. β -actin is used for normalization of protein expression. Percentage of knock-down is indicated. The frequencies of polyreactive (B) and HEp-2 reactive (C) new emigrant B cells from sorted GFP⁻ fractions were determined. Dotted line shows positive control. For each B-cell fraction, the frequency of reactive (filled area) and non-reactive (open area) clones is summarized in pie charts with the total number of clones tested indicated in the center. (D) The frequencies of antinuclear new emigrant B cells are compared between GFP⁻ and GFP⁺ shRNA⁺ new emigrant B cells.

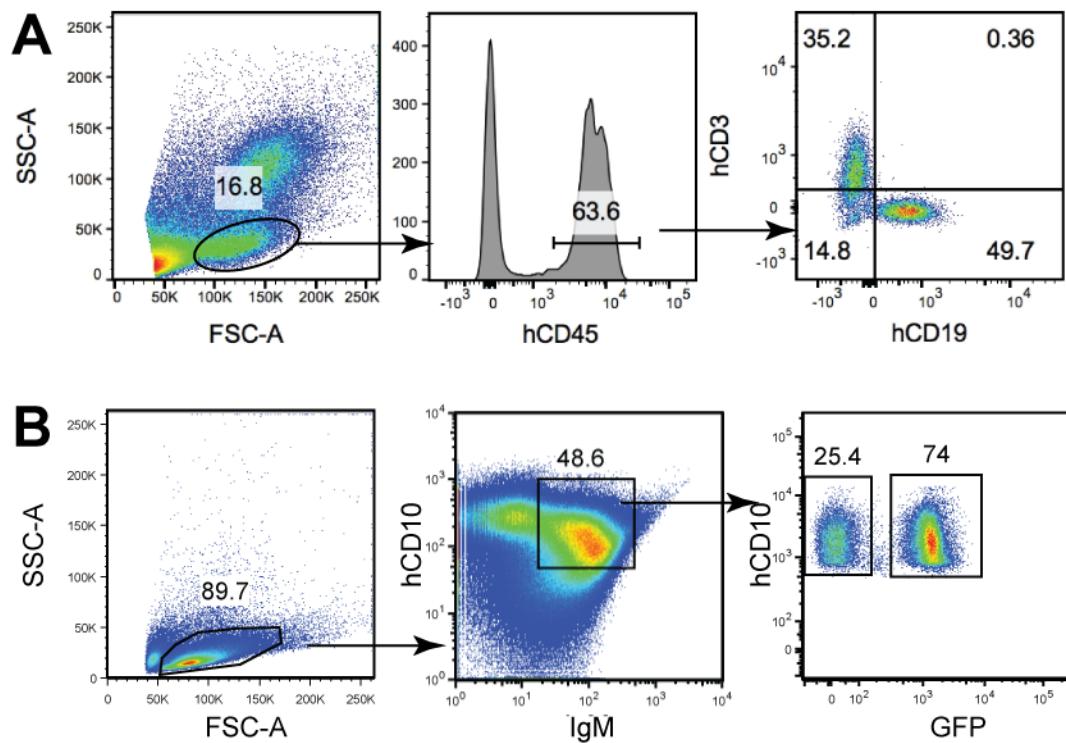

Figure S7: Representative gating strategies. **(A)** Representative flow cytometry analysis of the frequency of human CD45⁺, CD3⁺ and CD19⁺ cells in the blood NSG mice. **(B)** Representative flow cytometry analysis of CD19⁺ cells isolated from the spleen of NSG mouse engrafted with HSCs transduced with GFP-tagged lentiviruses. CD19⁺ B cells were stained with anti-hCD19, anti-IgM and anti-hCD10 antibodies.

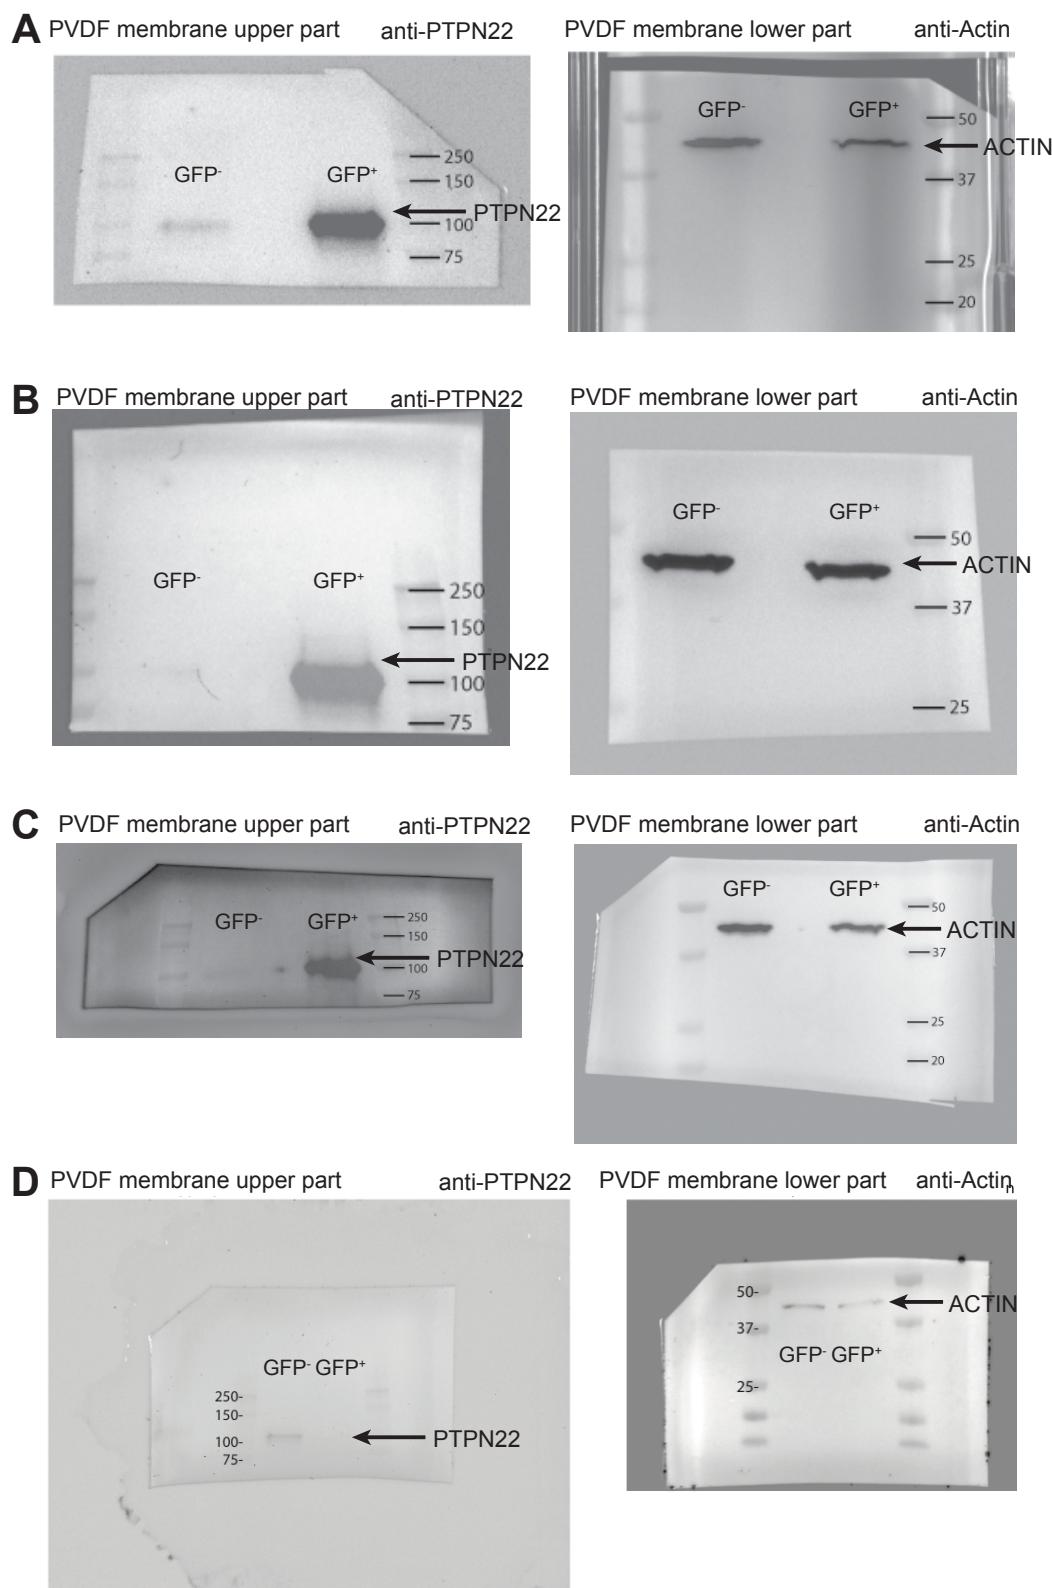

Figure S8: Unprocessed immunoblot images. Western Blot analysis of PTPN22 (left image) and ACTIN (right image) protein expression in GFP⁻ and GFP⁺ overexpressing 620W PTPN22 (**A**), 620R PTPN22 (**B**) and 263Q PTPN22 (**C**) hCD19⁺ cells isolated from the spleen of NSG mice. (**D**) PTPN22 (left image) and ACTIN (right image) protein expression in GFP⁻ and GFP⁺ shRNA⁺ hCD19⁺ cells isolated from the spleen of NSG mice.

Supplementary Tables

Table S1: Fetal donor characteristics

Donor #	PTPN22 genotype	Age (days)	Gender
1	C/C	105	Female
2	C/C	115	Female
3	C/C	108	Male
4	C/C	110	Female
5	C/C	120	Male
6	C/C	137	Female
7	C/C	112	Female
8	C/T	122	Female
9	C/T	125	Female
10	T/T	105	Female
11	C/C	111	Female
12	C/C	108	Female
13	C/T	125	Female

C/C: homozygote for the *PTPN22* C allele in position 1858

C/T: heterozygote for the *PTPN22* T allele in position 1858

T/T: homozygote for the *PTPN22* T allele in position 1858
