

Tspan5 is an independent favourable prognostic factor and suppresses tumour growth in gastric cancer

SUPPLEMENTARY FIGURE

Supplementary Figure S1: Tspan5 did not affect the apoptosis of GC cells. Annexin V-APC and PI labeling apoptosis assays showed no significant difference for the percentage of apoptotic cells between Tspan5-overexpressing GC cells and the control cells of either AGS (upper panels: Student's t-test, $P=0.521$) or MKN45 (lower panels: Student's t-test, $P=0.812$).
