

Supplemental Figure 1. Eight differentially expressed genes stratified by outcome group; SLE flare (n=11), SLE infection (n=12), SLE both infection and flare (n=4). P values are denoted as follows: * p<0.05, ** p<0.001, *** p<0.0001.

Supplemental Figure 2. Fli-1 expression in lupus nephritis. Fli-1 is upregulated in SLE subjects with active lupus nephritis (n=7) compared to SLE subjects without nephritis (n=8) (p=0.022).

Supplemental Figure 3. Heatmap of IFN inducible genes (modified from Baechler et al. (16) in healthy controls, inactive SLE, SLE-infection and SLE-flare.
