

Supplementary information, Figure S9 MH-S cells were infected with *K.*

pneumoniae NTUH-2044 and *E. coli* K12 respectively at an MOI of 20:1. CRISPR

transcripts of MH-S phagocytized *K. pneumoniae* (**A**) and *E. coli* (**B**), were quantified

at the indicated time points by qPCR. Data are representative of three independent

experiments expressed as means \pm SEM (n=3).
