Fig 2

Supplemental Figure 2: Mitogenic stimulation of serum starved fibroblasts leads to similar levels of UBF protein induction as does c-MYC activation.

(A): pBabe-MYC-ER NIH3T3 cells were serum starved for 24 h before either MYC-ER was activated with 4OHT for 24 h or cells were re-fed with media containing 10% serum for 24h. Cells were then harvested and total protein lysates prepared for western analysis of UBF protein expression (actin protein levels demonstrate equal protein loading).
